DWB – UL489 Listed

Introducing the New WEG DWB Series Molded Case Circuit Breakers. With its compact frame the DWB provides an economical circuit protection solution for Commercial & Industrial machinery applications. The DWB Series ranges from 20 to 600Amps and is available in 80% Standard and 100% Premium ratings.

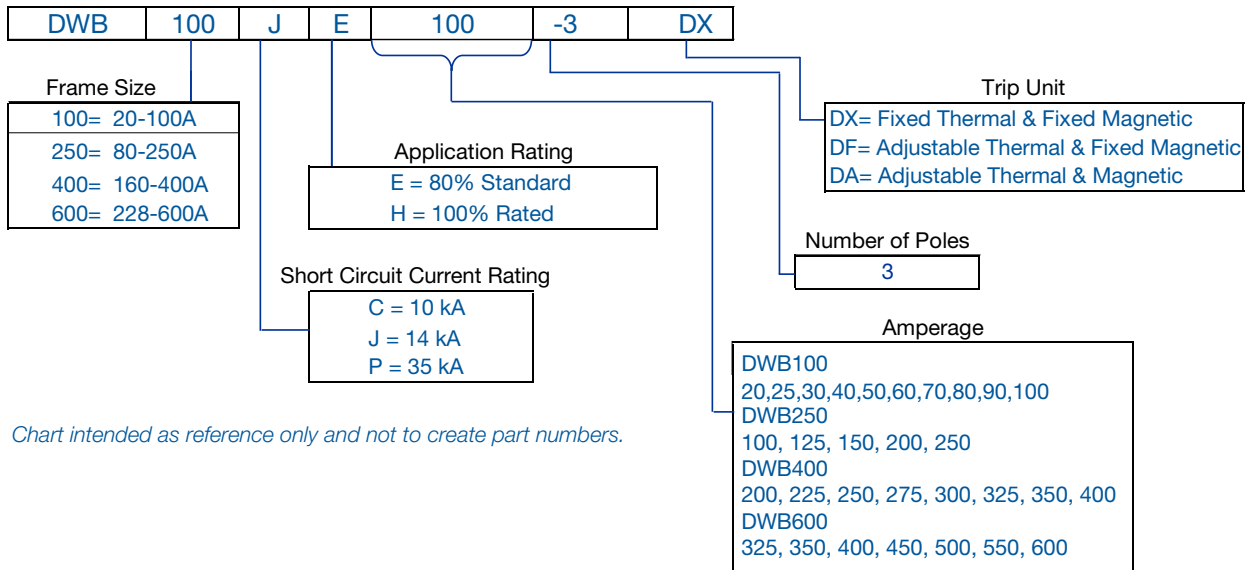

UL File No. E310239

Standard Features:

- Compact Size
- Thermal-Magnetic trip unit
- Complete line of field installable accessories
- Rotary Handle and Mechanism
- Lugs included

DWB

DWB - Internal Accessories

Auxiliary and Alarm Switches

Frame Size	Internal Accessory	Number of Contacts	Catalog Number	List Price	Multiplier
DWB100 - 600	Aux Switch BC	1	BC-1 DWB	\$98	Z10
		2	BC-2 DWB	\$160	
	Alarm Switch AL	1	AL-1 DWB	\$98	
	Aux Switch & Alarm Switch BCAL	1BC + 1AL	BCAL-2 DWB	\$160	

Electrical Characteristics

Rated Voltage	Type of Load	Switching Capacity (Amp)
125 VAC	Resistive	6
250 VAC	Resistive	6

BC Auxiliary Switch

- Indicates remote circuit breaker status “open” (OFF) or “closed” (ON) through SPDT form C contacts.

AL Alarm Switch

- Indicates circuit breaker has tripped due to overload, short-circuit, shunt trip or undervoltage-trip release conditions through SPDT form C contact.
- Contact opens when circuit breaker is reset
- Offers provision for audio and visual indication of tripped breaker due to conditions described above

BCAL Auxiliary and Alarm Switch

- Auxiliary and alarm switch incorporated into one unit

BC, AL & BCAL

- All come with built-in terminal blocks. These terminal blocks will accept 20 to 16 AWG (0.5 to 1.5mm²) Tightening torque of 6.9 lb.in. (0.8 N.m.).

*Complete Catalog Number, Replace * with Appropriate Voltage Code

Voltage Codes

E26	E27	E10	E15
24V ac/dc	48V ac/dc	110-130V ac/dc	220-250V ac/dc

BD Shunt Release

- When energized by a pulse or maintained signal of voltage, the shunt release trips breaker (trip position). Shunt release works from 70 to 110% of rated voltage ($0.70 \times U_n < U_e < 1.1U_n$).
- Features a device to keep unenergized after tripping pulse.

BS Undervoltage Release

- Trips breaker when the voltage drops below 35% of the rated voltage ($U_e < 0.35 \times U_n$)
- When voltage is between 35 to 70% of rated voltage, it may open the circuit breaker ($0.35 \times U_n < U_e < 0.7 \times U_n$)
- After the operation of BS release, circuit breaker can only be closed if supply voltage is above 85% of the rated voltage ($U_e > 0.85 \times U_n$)
- The BS undervoltage release along with an emergency stop push button makes possible for fail-safe operation of the circuit breaker

BD & BS Release

- All come with built-in terminal blocks. These terminal blocks will accept 20 to 16 AWG (0.5 to 1.5mm²). Tightening torque of 6.9 lb.in. (0.8 N.m.). After BD or BS operation the circuit breaker has to be reset before being closed again.

Maximum Combinations of Internal Accessories

Model	DWB160 ¹⁾				DWB250 ¹⁾				DWB400 ¹⁾				DWB600

Undervoltage release BS	0	0	1	1	0	0	1	1	0	0	1	1	0	0	1	1

Notes:

- 1) Sold separately only. It is not sold assembled on the circuit breaker.
- 2) For combination of BC + AL, always consider the BC/AL block. It is not possible to assemble individual blocks on the circuit breaker. BC1 + AL1, replace this combination by the BC/AL2 block.

Assembly Position of the Internal Accessories

Circuit Protection

DWB

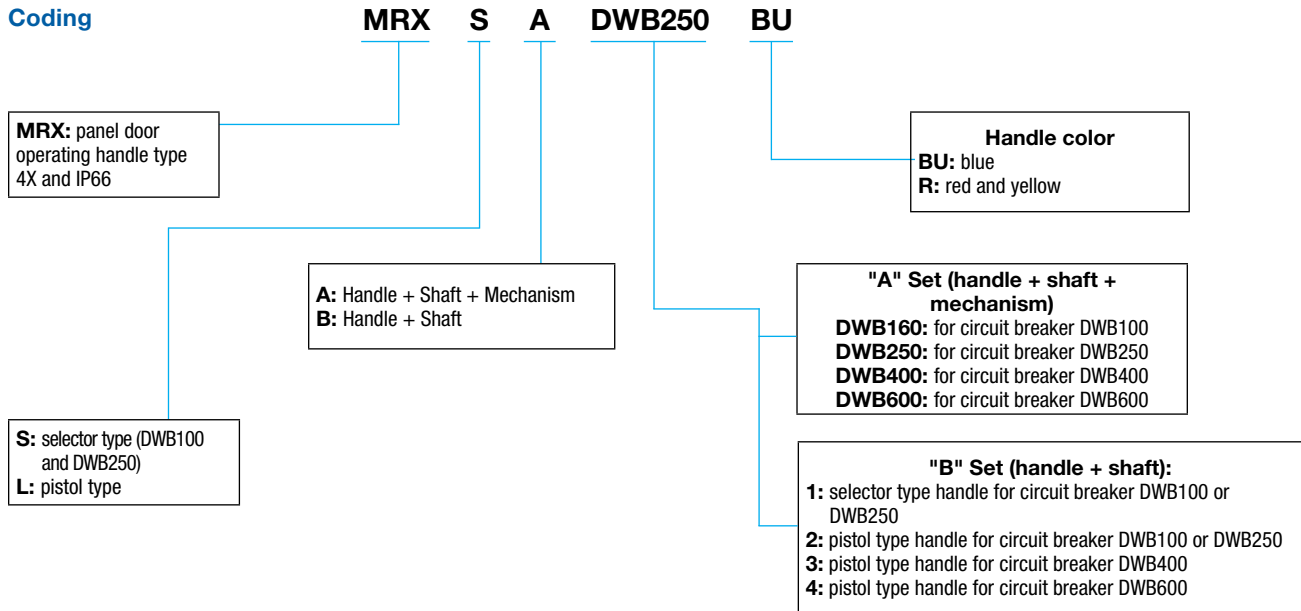

External Accessories

Panel Door Operating Handles

Handle (IP66)

- When in ON position, panel door cannot be opened, unless a tool is used to bypass the panel door locking system, allowing thermometry of the panel.
- Circuit breaker and panel door padlocking in OFF position using 1 to 3 padlocks.

Shaft Support

- Recommended when the shaft length is more than indicated in next table.

Catalog Number	Circuit breaker	Shaft length to use of support	List Price	Multiplier
MR DWB400	DWB400	> 380 mm	\$45	Z10
MR DWB800-1600	DWB600	> 320 mm	\$50	

Note: sold separately only. It is not sold assembled on the circuit breaker. Accessory may be used on frames 3P and 4P.

Changeover Device

Manual-operated changeovers are used to make safe switching of two different circuits.

BLIM Mechanical Interlock

- Provides safe operation in a manual-operated changeover system
- Makes the mechanical interlock of 2 circuit breakers of the same frame size, preventing both MCCBs to be in ON position
- Interlock is assembled directly to the front cover of the circuit breakers
- It can be padlocked in 2 positions: MCCB1 ON and MCCB2 OFF, MCCB1 OFF and MCCB2 ON
- BLIM allows padlocks with diameters of Ø0.16...0.31 inches (4...8 mm)
- It is possible to interlock 3 MCCBs side-by-side using 2 BLIMs
- Padlocks are not supplied

External accessory	MCCB	Catalog Number	List Price	Multiplier

DWB

External Accessories

Accessory for Connection and Installation

Depending on the application and local standards, the MCCB may be installed and connected through busbars or cables. Given these requirements, the DWB range of circuit breakers have the specific connection accessory to comply with.

PC Wiring Terminals (Lugs)

Provides the means for connecting the circuit breaker to the power source and the load

- PC is supplied with 3 pieces that are suitable for either line or load terminals
- Built-in on DWB100 in the 6 terminals
- Lugs are supplied with 6 units for DWB250, DWB400 and DWB600 (supplied as standard)
- Pack with 3 units for spare parts

External accessory	Spare part (units)	MCCB	Minimum cross-section (AWG / mm ²)	Maximum cross-section (AWG / mm ²)	Tightening torque (in-lb / N.m)	Catalog Number	List Price	Multiplier
Wiring terminal PC	3	DWB250	4 / 25 (1 cable)	250 kcmil / 120 (1 cable)	220 / 25	PC DWB250	\$87	Z10
		DWB400	3/0 / 95 (1 cable)	500 kcmil / 240 (1 cable)	265 / 35	PC DWB400	\$140	
		DWB600	400 kcmil / 240 (1 cable) or 3/0 / 95 (2 cables)	350 kcmil / 185 (2 cables)	310 / 55	PC DWB800-1000	\$250	

DIN Rail Base

- Quick assembly of DWB100 on 35 mm DIN rails
- Fast replacement when panel is under maintenance

External accessory	MCCB	Catalog Number	List Price	Multiplier
DIN rail base	DWB100	BFR DWB160 3P UL	\$25	Z10

Escutcheons and Lock-OFF Devices

MP Escutcheons

- Escutcheons are frames for cutouts in panel doors
- It makes possible the external switching of the MCCB through the front door when the circuit breaker is installed close to the panel door, maintaining the degree of protection
- Degree of protection IP40
- See section Dimensions for cutout details

External accessory	MCCB	Catalog Number	List Price	Multiplier
Escutcheon MP	DWB100	MP DWB160	\$12	Z10
	DWB250	MP DWB250	\$14	
	DWB400	MP DWB400	\$15	
	DWB600	MP DWB800-1600	\$15	

Note: degree of protection rating (IP) according to IEC 60529.

PLW Lock-OFF Devices

- The PLW is a fixed-type device that is installed on the front of the MCCB ensuring the MCCB locking in OFF position
- It can be padlocked using 1 to 3 padlocks. PLW allows padlocks with diameters of Ø0.16...0.31 inches (4...8 mm)
- Padlocks are not supplied

External accessory	MCCB	Catalog Number	List Price	Multiplier

UBW Series

Molded-Case Circuit Breaker UL 489 Listed

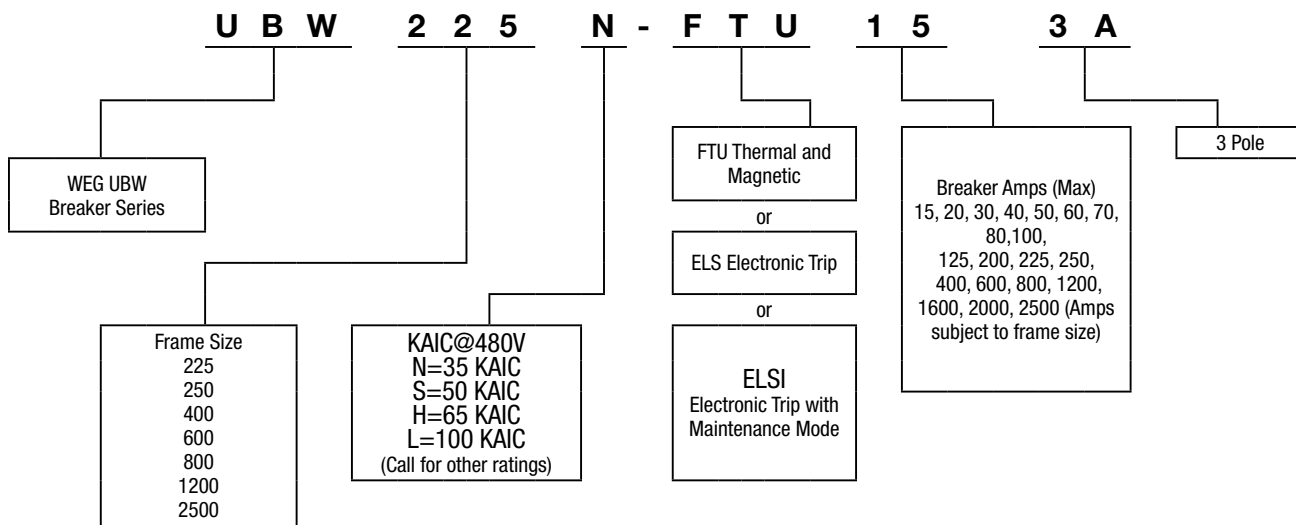

The WEG UBW Series of Molded Case Circuit Breakers are designed to provide short circuit and thermal protection for industrial electrical equipment. The UBW product line ranges from 15A to 2500A and SCCR ratings for 35-100 KAIC to meet more of your application requirements. The UBW line offers the quality, reliability and uncompromising protection that you have come to expect from WEG.

UL File No. E310239

Standard Features:

- Broad product offering up to 2500 Amps
- Multiple SCCR Ratings up to 100 KIAC Ratings
- 80% rated for standard UL application
- Maintenance mode for superior Arc Flash Protection
- Field or Factory installed options
- Optional multi-conductor load side lugs
- Panel Mount Only
- Ambient temperature compensation -4...+158°F (-20...+70°C)

*If ordering with factory-installed options, add alpha numeric option code sequence after "3A". See page 33 for more information.

Chart intended as reference only and not to create part numbers.

Note:
WEG's position currently, is that for voltage and interrupting capacity MCCB operation should be de-rated 2.5% for every 1000 ft. increase in elevation above 3000 ft. De-rating for current carrying capacity at increased altitude should be calculated in a manner equivalent to a 3°C increase in ambient temperature for each 1000 ft. increase in elevation above 3000 ft. This is in addition to any thermal de-rating that may apply at altitude.

UMBW-UL489 and UL1077 Listed

Introducing the New WEG UMBW Series Thermal-Magnetic Miniature Circuit Breakers. This new offering includes both UL489 and UL1077 approvals to provide a solution for circuit & equipment protection in Industrial Electrical equipment. The UMBW has a range from 1 to 60 Amps, available in 1,2, 3 poles, and B, C, D trip curves.

Standard Features:

- AC & DC voltages available in one Series
- UL489 Branch Circuit protective device
- UL1077 Equipment protection
- 17.5mm width per pole
- Visual status indication
- Positive trip-free snap action mechanism to ensure reliable switching
- Cutable Busbar connecting system

UL 489 UL File No. E468810
UL 1077 UL File No. E468808

Miniature Circuit Breakers Accessories

Auxiliary Contacts

Signaling contacts that open and close with the breaker. Provide remote status indicating ON and OFF only.

For Use With	Catalog Number	Operating Voltage	Operating Amperage	Contacts	Mounting/Dims (mm)	Mechanical Operations	Torque	Mass	QTY	List Price	Multiplier
UMBW-1 UMBW-4	UMBW-AUX	12-240VAC	6A	1NO/1NC	Field Mountable..Left Side/ 9mm	20,000	1 N-m, .74 Ft.-lbs.	29g	1	\$55	Z12
		277VAC	3A								
		12-24VDC	6A								
		48VDC	3A								
		110-220VDC	1.5A								

Bell Alarm

Provides provisions for visual and alarm indication when the breaker in the Tripped status, due to Short Circuit, Overload or Undervoltage. Breaker must be re-set to open contacts.

For Use With	Catalog Number	Operating Voltage	Operating Amperage	Contacts	Mounting/Dims (mm)	Mechanical Operations	Torque	Mass	QTY	List Price	Multiplier
UMBW-1 UMBW-4	UMBW-BAC	12-240VAC	6A	1NO/1NC	Field Mountable..Left Side/ 9mm	10,000	1 N-m, .74 Ft.-lbs.	29g	1	\$68	Z12
		277VAC	3A								
		12-24VDC	6A								
		48VDC	3A								
		110-220VDC	1.5A								

Shunt Trip

Provides ability to trip breaker from remote location when power is applied.

For Use With	Catalog Number	Voltage/Min Trip Voltage	Amperage/ Power Consumption	Contacts	Mounting/Dims (mm)	Mechanical Operations	Torque	Mass	QTY	List Price	Multiplier
UMBW-1 UMBW-4	UMBW-ST12DC	12 VDC/ 8VDC	6A/ 200W	1NO/1NC	Field Mountable..Left Side/18mm	20,000	1 N-m, .74 Ft.-lbs.	60g	1	\$95	Z12
	UMBW-ST24DC	24 VDC/ 16VDC	6A/ 200W							\$95	
	UMBW-ST48DC	48 VDC/ 24VDC	2A/ 200W							\$95	
	UMBW-ST125DC	125 VDC/ 80VDC	1.5A/ 200W							\$95	
	UMBW-ST120AC	120 VAC/ 80VAC	6A/ 200W							\$95	
	UMBW-ST240AC	240 VAC/ 160VAC	6A/ 200W							\$95	
	UMBW-ST277AC	277 VAC/ 160VAC	3A/ 200W							\$95

AC Application

1-pole

2-pole

3-pole

4-pole

DC Application

When using the UMBW in DC application, polarity does not have to be observed. Max. acceptable voltage between the conductors depends on the number of poles, circuitry and relevant standard / approval.

To IEC/EN 60947-2:

To UL 489 and UL 1077:

Curves Data

Magnetic tripping currents are increased by 30 % on DC supplies.

B CURVE - Tripping Characteristics:

Calibrated for resistive or non/low inductive loads.
Applications: Lighting, Control Circuits

C CURVE - Tripping Characteristics:

Calibrated for general purpose inductive loads.
Applications: Fluorecent lighting, midrange inductive motors

D CURVE - Tripping Characteristics:

Calibrated for inductive loads with high inrush currents

Applications:

Motors, Transformers

Note:

When mounted side by side, the breakers can only carry up to 80% of their rated current or a higher rating has to be selected (see technical data information).

MSW Series

Introducing the New WEG MSW Series Disconnect Switches. The MSW was developed according to IEC 60947-3 & UL508. The compact, reliable design of the MSW allows the operator to safely disconnect power and isolate the circuit within the panel. The MSW has a range of 25 to 160Amps, panel or door mount options, and offers a variety of accessories.

Standard Features

- Suitable as Motor Disconnect
- Base or Door mounting options
- DIN or base mounted
- Through the door or direct mount handles
- Touch Safe IP20

UL File No. E189202

MSW Contactor Catalog Number Sequence

MSWB Series

Introducing the WEG MSWB Series Enclosed Disconnect Switches, compact switching solutions for AC power applications. The MSWB was developed according to IEC 60947-3 and UL508. It is used for manually isolating or interrupting electrical circuits under load conditions. Often used as a means for secondary lock-out / tag-out scenarios. The switches are available in 3 poles up to 80A for resistive loads and up to 42A for inductive applications.

Standard Features

- Suitable as Motor Disconnect
- Surface mounting
- Two color options:
 - Yellow cover with red handle
 - Gray cover with black handle
- Thermoplastic and robust Type 1, 4, 4X (IP65) enclosure with black enclosure base
- Protection ratings:
 - IP65 protection rating for handles allowing up to three padlocks in “OFF” position
 - IP20 protection rating for internal terminals
- Knock-outs for cable gland provides flexibility for cable entry/exit on the top, bottom, and rear of the box

MPW Series

The WEG MPW Series Manual Motor Protectors provide a very compact solution for operation and protection in motor control applications. The NEC requires four functions to be considered a combination motor starter: Motor Disconnect, Branch Circuit Protection, Motor Controller and Motor Overload Protection. The WEG MPW meets all of these requirements, and the requirements of UL for Self-Protected Motor Controllers to be used in Type-E & F applications. With worldwide approvals the WEG MPW can be used in a variety of applications all over the world.

UL File No. E172121

Standard Features

- High short-circuit interrupting ratings- Up to 65kA @480V
- Phase Loss sensitivity protection
- UL Type-E self-protected combination starter
- Suitable for Motor Disconnect applications
- Group motor installations (per NEC Article 430)
- Wide variety of Accessories
- Rated for DC applications

MPW Catalog Number Sequence

Motor Protectors

MPW

MPW18 - Product Selection

- Suitable for manual motor controller and group installation
- Built-in protection: disconnect means, short circuit protection, motorcontrol and overload protection
- Short circuit interrupting capacity up to 50kA@480Vac (10kA@600Vac)
- Fixed short circuit release 13 x I_n
- Phase loss sensitivity
- Ambient temperature compensation -40...+140°F (-20...+60°C)

Accessories for Group Motor Installation ¹⁾			
Three Phase Line Side Feeder Terminal	FTBBSP	\$35	Z4
Busbar system 45mm (for 2 MPW without side mounting auxiliary contacts)	BBSP45-2	\$32	
Busbar system 45mm (for 3 MPW without side mounting auxiliary contacts)	BBSP45-3	\$35	
Busbar system 45mm (for 4 MPW without side mounting auxiliary contacts)	BBSP45-4	\$45	
Busbar system 45mm (for 5 MPW without side mounting auxiliary contacts)	BBSP45-5	\$60	
Busbar system 54mm (for 2 MPW with side mounting auxiliary contacts)	BBSP54-2	\$32	
Busbar system 54mm (for 3 MPW with side mounting auxiliary contacts)	BBSP54-3	\$35	
Busbar system 54mm (for 4 MPW with side mounting auxiliary contacts)	BBSP54-4	\$45	
Busbar system 54mm (for 5 MPW with side mounting auxiliary contacts)	BBSP54-5	\$60	
Shroud for unused terminals of BBS bars	CSDP	\$10 ²⁾	
Under Voltage and Shunt Block Releases			
Shunt release block right side mounting - 20-24V 50/60Hz	SRMP D51	\$56	Z4
Shunt release block right side mounting - 100-127V 50/60Hz	SRMP D59	\$56	
Shunt release block right side mounting - 200-240V 50/60Hz	SRMP D65	\$56	
Under voltage release block right side mounting - 24V 60Hz	URMP V05	\$56	
Under voltage release block right side mounting - 120V 60Hz	URMP V18	\$56	
Under voltage release block right side mounting - 208V 60Hz	URMP V23	\$56	
Under voltage release block right side mounting - 240V 60Hz	URMP V30	\$56	
Under voltage release block right side mounting - 480V 60Hz	URMP V47	\$56	
Other Accessories			
Scale cover protection for the current range adjustment - package with 5 units	SCMP	\$5	Z4
Lugs for panel mounting - package with 2 pieces (one MPW mounting)	PLMP	\$0.50	

Notes: ¹⁾ Maximum Amps of each Busbar system (BBS) must not be exceeded by adding multiple MPW. Busbar capacity is 63Amps.
²⁾ Unit list price. Product sold in multiples of 10 units.

Motor Protectors

MPW

MPW40 - Product Selection

- Suitable for manual motor controller, group installation, tap conductor and combination starters* Type E & Type F
- Built-in protection: disconnect means, short-circuit protection, motor control and overload protection
- Short-circuit interrupting capacity up to 50kA@480Vac (25kA@600Vac)
- Fixed short-circuit release 13 x I_n
- Phase loss sensitivity
- Ambient temperature compensation -4...+140°F (-20...+60°C)

* When associated with line side terminal LST25 and trip indicator TSB

WEG's Self Protected Combination Type-E Motor Controller with Unmatched Features and Benefits

Combination starters are the most common type of packaged motor controllers. They are called combination because of their construction and combined functions required by the US National Electric Code (NEC): Motor Disconnect, Motor Branch Circuit Protection, Motor Controller and Motor Overload Protection. UL1 currently recognizes six different types of combination starters that meet the requirements of a motor branch circuit.

Constructions Types A through D are traditional starters that use either a listed disconnect switch and fuses or a listed circuit breakers as the disconnect means and for short circuit protection. Each type uses a separate UL 508 listed motor controller and overload relay. Recently revisions on UL508 introduced the Type E and Type F starters.

UL Combination Starter Type	Device Used for Component Function			
	Disconnected	Branch Circuit Protection	Motor Controller	Motor OL Relay
A	UL 98 Manual Disconnect	UL 248 Fuses	UL 508 Magnetic or Solid State Controller	UL 508 Motor Overload Relay
B		UL 508 Motor Short Circuit Protector		
C	UL 489 Inverse Time Circuit Breaker			
D	UL 489 Instantaneous Trip Circuit Breaker			
E	UL 508 Self-protected Combination Controller			
F	UL 508 Manual Self-protected Combination Controller	UL 508 Magnetic or Solid State Controller	UL 508 Manual Self-Protected Combination Controller	

Type E starter is a self-protected combination motor controller that combines in a single device all the required functions of a combination starter and eliminates any additional requirements for upstream fuses or circuit breakers. These starters clear faults within their rating without sustaining damage to themselves or the rest of the system, being able to get back into operation. There are two arrangements for a Type E starter: manual (as stand-alone) and associated with a contactor. Both are submitted to the same tests sequences.

Type F starter consists of a listed manual Type E combined with a UL508 listed contactor. The difference between the two types is related to the absence of self-protected characteristic; hence, Type F has softened tests sequences allowing damages on the contactor after a fault.

Tests performed in order to fulfill the Type E requirements are considered the hardest in UL508, including short-circuit and endurance tests on the same sample. As a comparison, UL Type E exceeds the requirements for Type F and IEC60947-4-1 Coordination type 2.

WEG's self-protected combination Type E combines all of these functions within a single product for a manual operation or within a set of two products (with a listed

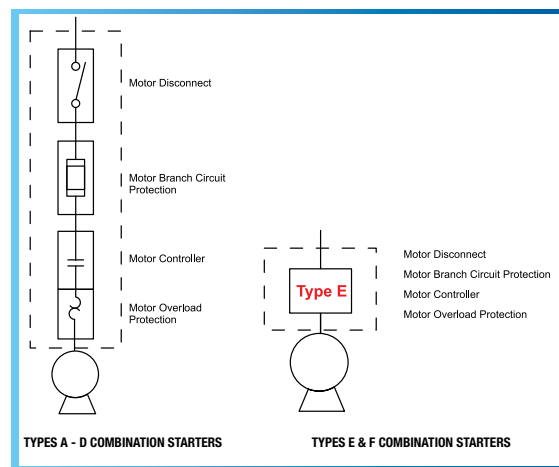

contactor) for a remote operation. Both options must be associated with the accessories Line Side Terminal (LST25) and Tripping Signaling Block (TSB-22) to accomplish UL508/UL489 requirements for spacing (clearance and creepage) and short-circuit indication.

They are recommended for a wide range of applications where full voltage combination starters are required. Some examples are: Pumps, Industrial Washing Machines, Compressors, Blowers, Cutting Machines, Conveyors, Lumber Processing and many others.

The Manual Type E Starter is a stand-alone product – MPW series – that ranges from fractional up to 75Hp@460V motors (0.16 to 100A) with up to 100kA@480V and 50kA@600V interrupting short-circuit capability. Together with some accessories that complete this product line, the MPW series are a compact and reliable solution for starting and protecting motors.

WEG also offers an option for a remote Type E & F Starter, combining the MPW series (as a manual type E) together with a contactor from CWM Series. As this version undergoes the same tests, it has the same horse power ratings and short-circuit capabilities as the manual Type E. However, it provides remote operation and controlling of the application through the contactor's coil.

In addition to its popular line of UL enclosed starters, WEG is also providing a NEMA 4X (IP65) enclosed Type E Starter – ESWE – featuring as standard a handle for disconnect means through the door and a contactor for remote operation. Provisions for control circuit transformer installation as well as pilot lights are also included.

Motor Protectors

MPW

Manual Self-Protected Combination Motor Controller Type-E

- No need of upstream protective devices such as UL489 MCCB or UL248 fuses
- Built-in protections: disconnect means, short-circuit protection, motor control and over load protection
- Short-circuit interrupting capacity up to 100kA@480Vac (50kA@600Vac)
- Compact combination starter
- Phase loss sensitivity
- Ambient temperature compensation -4...+140°F (-20...+60°C)

Combination Motor Controller Type-F

- No need of upstream protective devices such as UL489 MCCB or UL248 fuses
- Built-in protections: disconnect means, short-circuit protection, motor control and overload protection
- Short-circuit interrupting capacity up to 100kA@480Vac (50kA@600Vac)
- Compact combination starter
- Phase loss sensitivity
- Ambient temperature compensation -4...+140°F (-20...+60°C)
- Remote operation

For use with		Description	Catalog Number	List Price	Multiplier
MPW100		Plastic Insulators for increasing creepage distance and clearances according to UL requirements.	IB MPW100	\$30	Z4

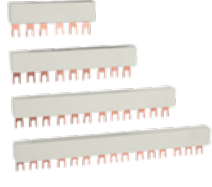

Three-phase Feeder Terminal – FTBBS, LST25, and LST65

For use with		Description	Catalog Number	List Price	Multiplier
MPW18 MPW40		<ul style="list-style-type: none"> - For feeding the feeder terminals; - Rated insulation voltage: 690VAC; - Rated operational current (I_o): 63A; - Terminals: 6-25mm² rigid wire and 6-16mm² flexible wire with terminal. 	FTBBS	\$35	Z4
MPW40		<ul style="list-style-type: none"> - Block module for "Type E" Combination motor Controller" in accordance with UL (LST25+MPW+TSB); - Rated insulation voltage: 690VAC; - Rated operational current (I_o): 63A; - Terminals: 8-20AWG. 	LST25	\$42	
MPW80		<ul style="list-style-type: none"> - Block module for "Type E" according to UL (LST65+MPW up to 65A+TSB); - Rated insulation voltage: 690 VAC; - Rated operational current (I_e): 120A; - Terminals: 4-8 AWG 	LST65	\$85	

Three-phase Feeder Terminals for MPW without side auxiliary contacts – BBS45

For use with		Description	Numbers of MPW	Catalog Number	List Price	Multiplier
MPW18 MPW40		<ul style="list-style-type: none"> - For parallel blocking of side-by-side mounted circuit breakers with screw terminal of the same model without side auxiliary contacts; - Enables the use of frontal auxiliary contact block ACBF-11; - Rated insulation voltage: 690 VAC; - Rated operational current (I_e): 63 A. 	2	BBS45-2	\$32	Z4
			3	BBS45-3	\$35	
			4	BBS45-4	\$45	
			5	BBS45-5	\$60	

Three-phase Feeder Terminals for MPW with side auxiliary contacts – BBS54

For use with		Description	Numbers of MPW	Catalog Number	List Price	Multiplier
MPW18 MPW40		<ul style="list-style-type: none"> - For parallel connection of circuit breakers with screw terminals of the same model mounted side-by-side; - Enables the use of side auxiliary contact block ACBS and ACBF mounted on each motor protective circuit breaker; - Rated insulation voltage: 690 VAC; - Rated operational current (I_e): 63 A. 	2	BBS54-2	\$32	Z4
			3	BBS54-3	\$35	
			4	BBS54-4	\$45	
			5	BBS54-5	\$60	

Motor Protectors

MPW

Accessories

Current Limiter - CLT32

For use with		Description	Catalog Number	List Price	Multiplier
MPW40		- For protecting electrical circuits where extra high short-circuit breaking capacity is required: 100kA @ 480VAC Note: This accessory must be used together with a MPW motor protector.	CLT32 MPW40	\$100	Z4

Shroud for unused terminals – CSD

For use with		Description	Catalog Number	List Price	Multiplier
BBS45 BBS54		Protection against direct contact on unused terminals on energized BBS45 and BBS54 three-phase feeder terminals.	CSD	\$10 ¹	Z4

Scale Cover - SCMP

For use with		Description	Catalog Number	List Price	Multiplier
MPW18 MPW40 MPW80		Protects the current adjustment dial against direct contact while enabling the set current to be viewed.	SCMP	\$5	Z4

Panel Mounting Kit - PLMP

For use with		Description	Catalog Number	List Price	Multiplier
MPW18 MPW40 MPW80		For direct mounting of manual motor protector onto any surface using screws.	PLMP	\$0.50	Z4

Notes: ¹ Unit list price. Product sold in multiples of 10 units.

		2	2.5...35 mm ²

Note: 1) 8 AWG for flexible cable only

MPW Technical Data

Altitude - Correction factor

The MPW manual motor protectors do not undergo any change to their specified performance when applied at an altitude of up to 2000 meters above sea level. However, as the altitude increases, the reduced atmospheric pressure produces decreasing dielectric properties. Therefore, current and voltage correction factors must be applied for altitudes exceeding 2000 meters, as shown in the table on the right.

Altitude (above sea level) - h	Rated operational voltage U_e	Current correction factor I_u
$h \leq 2000$ m	690 V	$1 \times I_u$
$2000 < h \leq 3000$ m	550 V	$0,96 \times I_u$
$3000 < h \leq 4000$ m	480 V	$0,93 \times I_u$
$4000 < h \leq 5000$ m	420 V	$0,90 \times I_u$

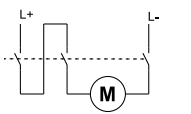

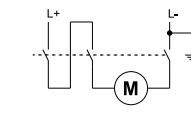

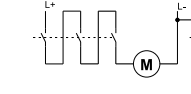

DC operation

The MPW18, MPW40 and MPW80 motor protective circuit breakers can also be used for operating DC loads. For such operation it is necessary to connect 2 or 3 poles in series.

See recommended circuits and their voltage limits in the table on the right.

Time constant $t = 5$ ms

Short-circuit breaking capacity $I_{cu} = 10$ kA for all configurations

Circuits	Max. VDC	Notes
	150 VDC	System not grounded 2 pole series connected
	300 VDC	System grounded 2 pole series connected
	450 VDC	System grounded 3 pole series connected

Characteristics Curves

Miniature Contactors - CWC Series

The CWC Series Mini Contactor Line is a Compact Solution for the Control and Operation of Circuits. Its extensive lineup of modular and tool-free accessories makes this series the most flexible mini-contactor available today. The CWC Series miniature contactor features more horsepower for its size than any other miniature contactor on the market.

Standard Features:

- Direct Mounting to RW17D Series Thermal Overload Relays
- Direct Mounting to MPW18 and MPW40 Series Manual Motor Protectors
- Low Consumption DC Coils
- Tool Free DIN Rail Mountable
- Frame size remains the same for AC and DC coil contactors up to 16A
- Complete line of snap-on accessories

UL File No. E202315

Operation Description of Latch Block RMC0 or Miniature Contactors CWCH0

Functional Diagram

- After a minimum pulse of 100ms on miniature contactors coil (K1), the RMC0 will keep K1 contacts switched on
- The miniature contactors K1 will only return to rest position after miniature contactors coil (K2) be energized by a releasing pulse
- The mechanical latch will always and only happen on miniature contactors (K1).

Note: if RESET miniature contactors coil (K2) remains energized, the latching of miniature contactors (K1) is not enabled.

Technical Data

Electrical Lifespan

AC-3 ($U_e \leq 415 \text{ V ac}$ e $U_e \leq 440 \text{ V ac}$)

CWB Line

Developed according to IEC 60947 and UL 508 international standards, the new WEG CWB line of contactors meets the requirements of a wide range of industrial applications. The CWBs are designed with the visual pattern and identity of WEG, a brand recognized worldwide for its quality.

Standard Features:

- “Zero-Width” Mechanical Interlock
- Simple and Compact Mounting of Surge Suppressor Blocks
- Contactor Coil Operated on AC or DC
- Simple and Organized Control Circuits
- Additional Contact Blocks
- Easy Access Power and Control Terminals

UL File No. E202315

		12...600 V dc		DIB C33 ⁶⁾		
		12...250 V dc		DIZB C26 ⁷⁾		

Notes:

1) The arrangement of the contacts meets IEC 60947-4-1 Annex F (Mirror Contact) and IEC 60947-5-1 Annex L (Mechanically Linked Contact) requirements.

2) Wiring numbers from BLB contact block for a combination of 2 side-mounted auxiliary contact blocks on the same side of the contactor.

3) The maximum number of auxiliary contacts allowed on the contactor is 4.

4) Cannot be used with additional contact blocks (front mount or side mount). It can be used with CWB contactor containing built-in auxiliary contacts.

5) Contactors CWB9...110 with DC coils assembled with surge suppressor DIB will increase the opening time by 6 times. The surge suppressor cannot be used with BLB or BFB auxiliary contact blocks that contain NC contacts.

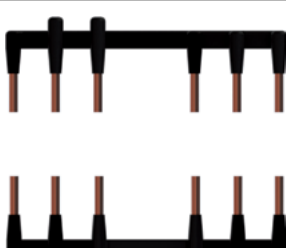

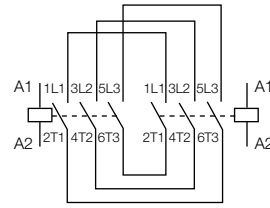

6) Contactors assembled with surge suppressor DIZB will increase the opening time by 4 times.

		(hp)	3	6.7	13.4	20.1	40

Note:

1) In order to achieve acceptable reliability for application and/or continuity test on the power contacts, a minimum voltage and current of 50 V and 100 mA, respectively, must be used. For lower values, the auxiliary contacts must be used.

CWBS Safety Contactors

CWBS line of contactors for safety applications (from 9 A to 125 A in AC-3) was developed in compliance with IEC and UL standards, featuring mechanically linked contacts (IEC/EN 60947-5-1) and mirror contacts (IEC/EN 60947-4-1), which provide proper operation of safety circuits of machines and equipment that must operate in compliance with international safety standards. The wide range of accessories allow fast and compact assembly for various applications.

Standard Features:

- Compact design
- Mechanically linked contacts (IEC 60947-5-1 - Annex L) and mirror contacts (IEC 60947-4-1 - Annex F).
- Available in versions up to 125 A (AC-3).
- Protection covers against manual operation
- 3-pole safety contactors available in AC and DC coils
- Panel mountable on 35mm DIN rails or screws
- Built-in auxiliary contacts 1NO+1NC
- Zero-width” and tool-free mechanical interlocks
- Plug-in surge suppressor blocks
- Easy-to-use accessories through snap-to-connect function

Standard Features:

- Spare AC and DC coils
- Mechanical interlock blocks
- Surge suppressors

Wiring Diagrams

1 Pole in Series

3 Poles in Series

2 Poles in Series

Notes: 1) Service duty according to IEC/EN 60947-4-1:

DC-1 (non-inductive or slightly inductive loads, resistive furnaces);

DC-3 (shunt-motors: starting, plugging and inching. Dynamic braking of DC motors);

DC-5 (series-motors: starting, plugging and inching. Dynamic braking of DC motors).

Contact Numbering According to IEC/EN 60947

Technical Data

Basic Data

Models			CWBS9	CWBS12	CWBS18	CWBS25	CWBS32	CWBS38
Compliance with the standards			IEC/EN 60947-1, IEC/EN 60947-4-1, IEC/EN 60947-5-1, UL 508					
Rated insulation voltage U_i (pollution degree 3)	IEC/EN 60947-4-1	(V)	690 V					
	UL, CSA	(V)	600 V					
Rated impulse withstand voltage U_{imp}	IEC/EN 60947-1	(kV)	6 Kv					
Frequency limits		(Hz)	25...400					
Mechanical life	AC coil (millions of operations)		10					
	DC coil (millions of operations)		10					
Electrical life	I_b AC-3 (millions of operations)		2.0	2.0	1.8	1.6	1.6	1.2
Degree of protection (IEC 60529)	Main terminals		IP10 (front)					
	Coil and auxiliary contacts		IP20 (front)					
Mounting			Screws or DIN rail 35 mm (EN 50022)					
Coil connection points	Contactors with AC coil		2					
	Contactors with DC coil		2					
Resistance to vibrations (IEC 60068-2-6)	Open contactor	(g)	4					
	Closed contactor	(g)	4					
Resistance to mechanical shocks (1/2 sine wave = 11ms - IEC 60068-2-27)	Open contactor	(g)	10					
	Closed contactor	(g)	15					
Ambient temperature	Operation	[°C(°F)]	-25 °C....+55 °C (-13 °F....+131 °F)					
	Storage	[°C(°F)]	-55 °C....+80 °C (-67 °F....+176 °F)					
Maximum operation altitude without modification in the rated values 1)			3,000 m					

Models			CWBS40	CWBS50	CWBS65	CWBS80	CWBS95	CWBS110	CWBS125
Compliance with the standards			IEC/EN 60947-1, IEC/EN 60947-4-1, IEC/EN 60947-5-1, UL 508						
Rated insulation voltage U_i (pollution degree 3)	IEC/EN 60947-4-1	(V)	1,000 V						
	UL, CSA	(V)	600 V						
Rated impulse withstand voltage U_{imp}	IEC/EN 60947-1	(kV)	6 Kv						
Frequency limits		(Hz)	25...400						
Mechanical life	AC coil (millions of operations)		6						
	DC coil (millions of operations)		6						
Electrical life	I_b AC-3 (millions of operations)		1.6	1.6	1.6	1.2	1.1	1.0	1.0
Degree of protection (IEC 60529)	Main terminals		IP10 (front)						
	Coil and auxiliary contacts		IP20 (front)						
Mounting			Screws or DIN rail 35 mm (EN 50022)						
Coil connection points	Contactors with AC coil		2						
	Contactors with DC coil		2						
Resistance to vibrations (IEC 60068-2-6)	Open contactor	(g)	4						
	Closed contactor	(g)	4						
Resistance to mechanical shocks (1/2 sine wave = 11ms - IEC 60068-2-27)	Open contactor	(g)	10						
	Closed contactor	(g)	15						
Ambient temperature	Operation	[°C(°F)]	-25 °C....+55 °C (-13 °F....+131 °F)						
	Storage	[°C(°F)]	-55 °C....+80 °C (-67 °F....+176 °F)						
Maximum operation altitude without modification in the rated values 1)			3,000 m						

Note: 1) For altitudes of 3,000...4,000 m (0.09xI and 0.80xUI) and 4,000...5,000 (0.87xI and 0.75xUI).

CWBS Series - Safety Contactors

Technical Data

Control Circuit - Alternating Current (AC)

Models			CWBS9...38	CWBS40...80	CWBS95...110
Rated insulation voltage U_i (pollution degree 3)	IEC/EN 60947-4-1	(V)	690	1,000	1,000
	UL, CSA	(V)	600	600	600
Standard voltages at 50/60 Hz		(V)	12...500	24...500	24...500
Coil operation limits	At 50 Hz	(xUs)	0.8...1.1	0.8...1.1	0.8...1.1
	At 60 Hz	(xUs)	0.8...1.1	0.8...1.1	0.8...1.1
Average coil consumption 50/60 Hz (operation at 60 Hz)	Closed magnetic circuit	(VA)	7.5	17.5	25
	Power factor switched on	(cos ϕ)	0.27	0.28	0.40
	Thermal power dissipation	(W)	1.5...2.5	4...5.5	9...11
	Closing of the magnetic circuit	(VA)	75	185	410
	Power factor switched on	(cos ϕ)	0.70	0.55	0.48
Average coil consumption 50/60 Hz (operation at 50 Hz)	Closed magnetic circuit	(VA)	9	27	27
	Power factor switched on	(cos ϕ)	0.24	0.25	0.40
	Thermal power dissipation	(W)	1.5...2.5	5.5...7.8	11...13.4
	Closing of the magnetic circuit	(VA)	90	202	426
	Power factor switched on	(cos ϕ)	0.80	0.56	0.50
Average operating time	Closing of the N.O. contacts	(ms)	15...25	10...15	8...12.5
	Opening of the N.O. contacts	(ms)	8...12	8...12	4...8

Control Circuit - Direct Current (DC)

Models			CWBS9...38	CWBS40...80	CWBS95...125
Rated insulation voltage U_i (pollution degree 3)	IEC/EN 60947-4-1	(V)	690	1,000	-
	UL, CSA	(V)	600	600	-
Standard voltages		(V)	12...500	12...500	-
Coil operation limits		(xUs)	0.8...1.1	0.8...1.1	-
Average DC coil consumption	Closed magnetic circuit	(W)	5.8	10.6	-
	Closing of the magnetic circuit	(W)	5.8	105.5	-
Average operating time	Closing of the N.O. contacts	(ms)	35...45	20...30	-
	Opening of the N.O. contacts	(ms)	8...12	4...8	-

Control Circuit - Electronic Coil (AC/DC)

Models			CWBS9...38	CWBS40...80	CWBS95...125
Rated insulation voltage U_i (pollution degree 3)	IEC/EN 60947-4-1, VDE 0660	(V)	-	-	1,000
	UL, CSA	(V)	-	-	600
Standard voltages		(V)	-	-	24...500
Coil operation limits	in V dc	(xUs)	-	-	0.8...1.1
	at 50 Hz	(xUs)	-	-	0.8...1.1
	at 60 Hz	(xUs)	-	-	0.8...1.1
Average coil consumption					1.0 x Us and cold coil
AC power supply (60 Hz)	Closed magnetic circuit	(VA)	-	-	10.8
	Power factor switched on	(cos ϕ)	-	-	0.47
	Thermal power dissipation	(W)	-	-	5.1
	Closing of the magnetic circuit	(VA)	-	-	217
	Power factor switched on	(cos ϕ)	-	-	0.88
DC power supply	Closed magnetic circuit	(W)	-	-	2...5
	Closing of the magnetic circuit	(W)	-	-	180...220
Average operating time	Closing of the N.O. contacts	(ms)	-	-	32...48
	Opening of the N.O. contacts	(ms)	-	-	30...55

CWM Series

The CWM Series IEC Contactor was designed as a general purpose contactor taking into consideration the heavy demands and need for high reliability in modern industry. They are rated for inductive loads up to 800 AMPS @ 460V. CWM Contactors are compact in frame size allowing for optimization of valuable internal space within electrical enclosures. Reducing inventory is a “Snap” away with the CWM Series’ common accessories.

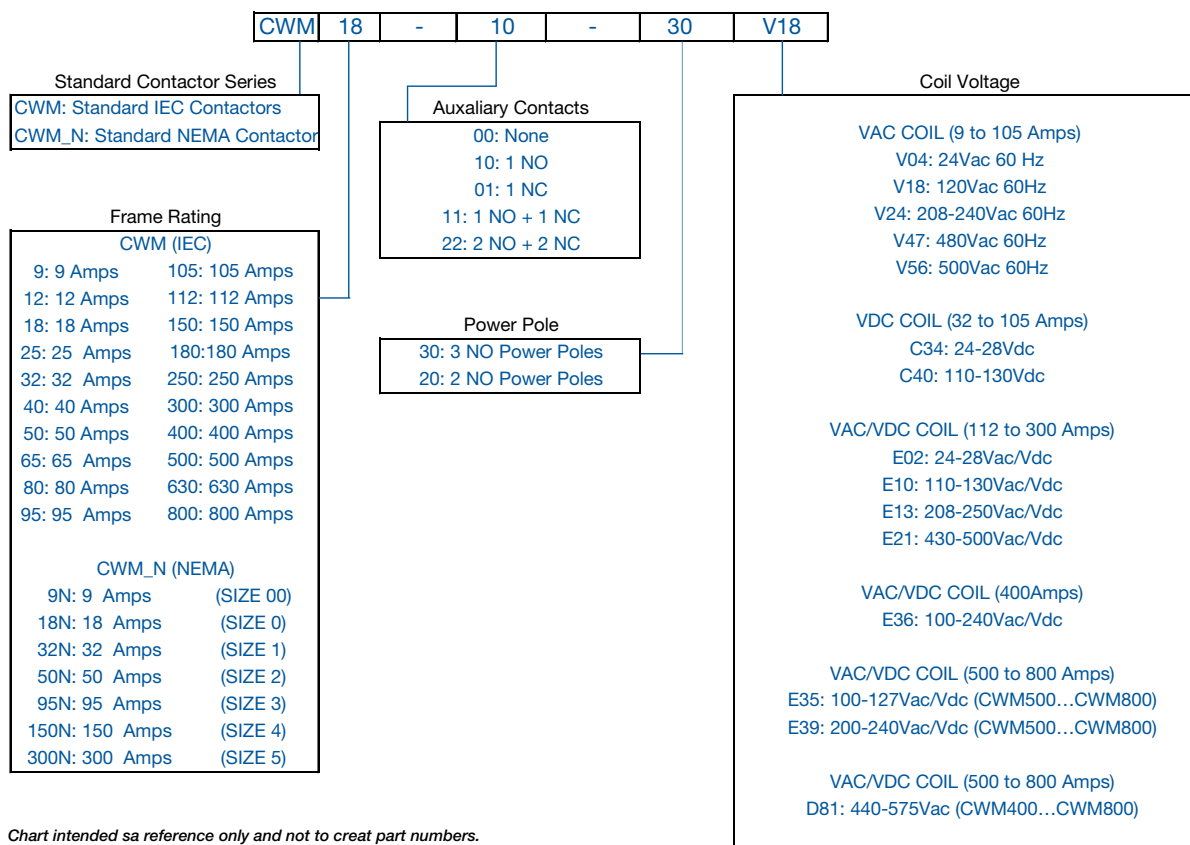

Standard Features

- Panel mountable or 35mm DIN Rail up to the CWM105 Series
- Front and Side Mounting Auxiliary Contacts
- Finger-Touch IP20 Protection
- Wide Coil Voltage Protection AC or DC
- Mirror Contacts for “Safety-Related” Applications
- Mechanically linked Auxiliary Contacts

UL File No. E202315

The Flexible Line from 5 to 75HP

The 5 to 75HP @ 460V range is differentiated by five frame sizes and only 4 varying widths, with the choice of either screw or DIN rail mounting. WEG offers one of the most compact 75HP @ 460V contactors in the market.

Coil Technology

WEG Contactor AC coils have 3 terminals up to 30HP @ 460V, which allows an easy connection no matter the complexity of the application and wiring. From 32A up to 105A the contactors are equipped with an electronic circuit that provides an unmatched space saving solution, making the 50A through 105A contactors depth the same size.

The Tough Line from 100 to 600HP

With reliability as our goal, WEG contactors are modern and very compact, but they are also one of the most rugged line of contactors in the range from 100 to 600HP, assuring an extended life under the most challenging conditions of today's industry.

Electronic Module

From 100 to 600HP @ 460V, WEG offers contactors with electronic module for AC/DC Coil Applications. Such coils provide a smoother switching, therefore enhancing contactor's performance. Built-in surge suppressor is also standard.

CWM-N Series

NEMA Rated Standard Contactors

The WEG CWM_N series NEMA rated contactor line has been designed for industrial duty and with reliability in mind. Rated for inductive loads up to 300 Amps or 200 Hp @ 460V, WEG can offer the suitable contactor for your application.

Customers who are used to specifying contactors (and starters), by a particular NEMA Size (size 00, 0, 1, 2, 3, 4, 5), now can use the WEG CWM_N series, NEMA rated contactors. Customers get the ease of choosing the product, the reliability of WEG quality, and still get the sophisticated arc quenching techniques to reduce excess heat on the contacts.

Given their compact footprints, CWM_N contactors allow total panel space optimization, with only a few compact frame sizes. Reducing inventory is a “snap” with CWM’s common accessories. For example, side mounted auxiliary contact blocks are the same from NEMA size 00 to 5.

Standard Features:

- Ease of choosing product
- Compact footprint
- Arc Quenching technique
- Reduced inventory with common accessories
- Adjustable thermal overload relay accessory for motor protection
- Reliable WEG Quality

3) DC coils cannot be used in AC coil contactors due to difference in size of coil housing.

CWMC Series

Switching of power factor correction capacitors

WEG's special CWMC contactors series for switching of capacitors is designed according to UL 508 and IEC 60947-1, and provides the best solution for the switching of power factor correction capacitors.

No more in-rush

When switching on a capacitor bank, the capacitors are uncharged and the system sees them as a short circuit for a quick period of time.

The in-rush current is the result of this little short circuit and usually lasts for some milliseconds. It may reach 100 times the rated current which one of the main reasons for the short life of a capacitor.

The CWMC contactor is assembled with damping resistors which limit the high in-rush current when the capacitors are switched on. They are assembled with an early-make contact block which is switched on before the main contacts thus, limiting the in-rush current.

However, the damping resistors don't influence the final load, since they are switched off after 5 milliseconds leaving only the capacitors in parallel with their inductive load providing the proper power factor correction. This process increases the lifetime of the capacitors and also prevents line distortions.

Current on the contacts, without damping resistors

I_u (A) with standard contactors

Current on the contacts, with damping resistors installed

I_u (A) with WEG CWMC contactor

Certifications

SABS - South Africa

Contactors for Capacitor Switching - CWMC Series

Modular design

For 35 mm DIN rail or screw assembly.

Damping resistors

Avoids high in-rush current

Contactor data and certifications

Shows all necessary information of CWMC.

Early make contact block

Connects damping resistors and switches off after 5 ms

Auxiliary Contact

CWMC allows use of standard NO or NC contact blocks, the same used with WEG CWM contactors series

New models

CWMC contactors are available in 5 different models in 3 different frames. All contactors are available with AC coils with a large variety of voltage ranges for 50 or 60 Hz. For DC coils and further information, please contact a WEG representative.

Graphic Altitude

NOTE:

Altitude compensation in CWM Series contactors, considers a factor according to which the rated power must be reduced.

The derating of the permissible operating power for installation altitudes above 1,500 m (5,000 ft) is calculated according to:

$$\text{Total derating} = \text{Derating}_{\text{current}} \times \text{Derating}_{\text{voltage}}$$

Example: Altitude: 3,000 m (10,000 ft):

Derating current K1 = 0.85

Derating voltage K2 = 0.88

$$\text{Total derating} = 0.85 \times 0.88 = 0.75 \text{ x HP}$$

Thermal Overload Relays

An extended operational service life is one of the main features you can find in RW overload relays. WEG's RW Thermal Overload Relays are designed for use with, and as perfect complement to, WEG contactors. RW overload relays can be mounted directly under WEG contactors, assuring electrical and mechanical operation as an open across-the-line starter. Accessories are also available for separate mounting.

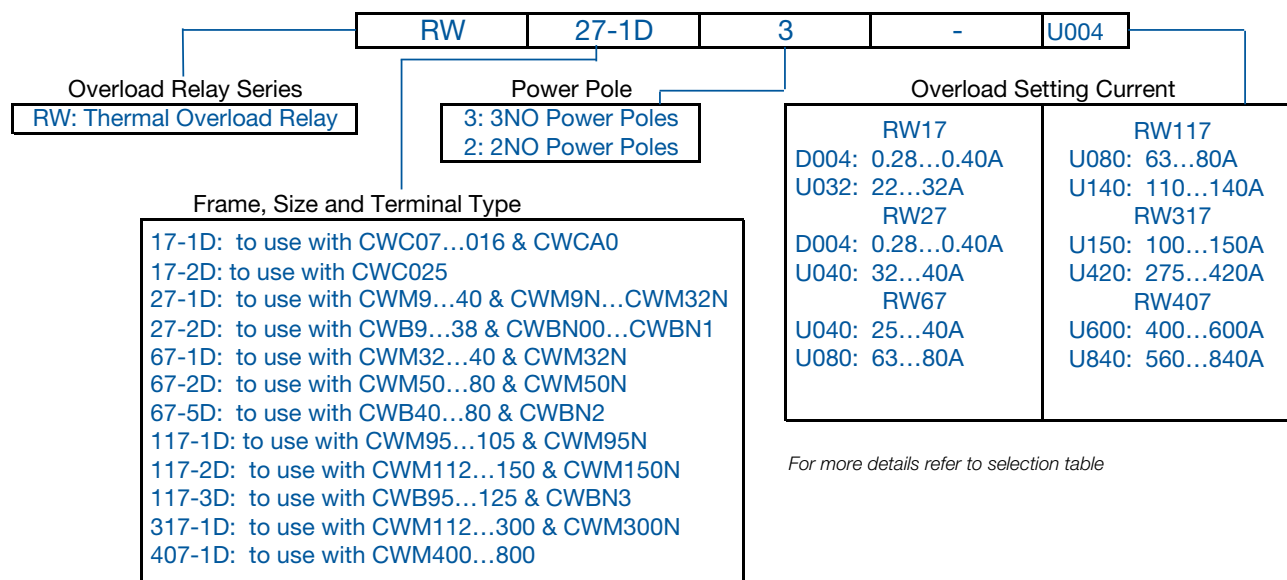

UL File No. E189202

Standard Features:

- 2 and 3 pole versions available
- Direct mounting to WEG contactors with no accessory
- Accessories also available for separate mounting
- Phase loss & current unbalance sensitivity protection
- Class 10 trip characteristics
- Selectable RESET button (automatic or manual)
- Isolated 1NO & 1NC auxiliary contacts

RW Series Catalog Number Sequence

For more details refer to selection table

Chart intended for reference only and not to create part numbers.

RW Series - Bi-Metallic

Multifunction Reset / Test Button

The thermal overload relay has a multifunction **RESET / TEST** button that can be set in four different positions:

A - Automatic **RESET** only;

AUTO - Automatic **RESET / TEST**;

HAND - Manual **RESET / TEST**;

H - Manual **RESET** only.

In **HAND** and **AUTO** positions, when **RESET** button is pressed, both NO (97-98) and NC (95-96) contacts change states.

**Operation description:**

In H (manual RESET only) or A (automatic RESET only) position, the test function is blocked. However in the positions HAND (manual RESET / TEST) or AUTO (automatic RESET / TEST) it is possible to simulate the test and the trip functions by pressing the RESET button.

When set in the H or HAND position the RESET button must be pressed manually to reset the overload relay after a tripping event. On the other hand, when set in A or AUTO position, the overload relay will reset automatically after a tripping event.

The H, HAND, AUTO and A function setting is carried out by rotating without pressing the red button and placing it on the desired position of the RESET button.

When changing from HAND to AUTO, the RESET button must be slightly pressed while the red button is rotated.

Functions	H	HAND	AUTO	A
Relay reset	Manual ¹⁾	Manual ¹⁾	Automatic	Automatic
Auxiliary contact trip test 95-96 (NC) opening test	Function is disabled	Test/Stop is allowed	Test/Stop is allowed	Function is disabled
Auxiliary contact trip test 97-98 (NO) opening test	Function is disabled	Test/Stop is allowed	Test/Stop is allowed	Function is disabled

Note: 1) A recovery time of a few minutes is necessary before resetting the thermal overload relay.

Recovery Time

The RW thermal overload relays have thermal memory.

After tripping due to an overload, the relay requires a certain period of time for the bimetal strips to cool down. This period of time is called recovery time. The relay can only be reset once it has cooled down. The recovery time depends on the characteristic tripping curves and the level of the tripping current. After tripping due to overload, the recovery time allows the load to cool down.

Operation in the Output Side of Frequency Inverters

The RW27-2D, RW67-5D, and RW117-3D thermal overload relays are designed for operation on 50/60 Hz up to 400 Hz and the tripping values are related to the heating by currents within this frequency range. Depending on the design of the frequency inverter, the switching frequency can reach several kHz and generate harmonic currents at the output that result in additional temperature rise in the bimetal strips. In such applications, the temperature rise not only depends on the rms value of the current, but on the induction effects of the higher frequency currents in the metal parts of the device (skin effect caused by eddy currents).

Due to these effects, the current settings on the overload relay should be higher than the motor rated current.

Dial FLA Setting

The trip-current is set via an infinitely adjustable dial designed with the motor's full load current (FLA) in mind.

Temperature Compensation

Because RW overload relays include a fourth bimetallic strip in addition to the three that are directly heated by the motor current, ambient temperature variations in the range of -4°F to +140°F are no obstacle for accurate protection of your motors even in the toughest conditions.

Phase Failure Sensitivity

WEG overload relays include phase failure sensitivity protection as a standard. This feature ensures fast tripping in case of phase loss, protecting your motor and avoiding expensive repairs and corrective maintenance.

For use with CWC, CWM and CWM-N Contactors

Three-pole Thermal Overload Relay Class 10

- Adjustable trip current
- Phase-loss sensitivity
- Trip class 10
- 1NO + 1NC Auxiliary contacts
- Temperature compensation from -4°F to +140°F
- Selectable Hand/Auto reset button

RW Series - Bi-Metallic

RW Tripping Characteristics

These tripping characteristics show the tripping of RW in relation to the current. They show the mean values of the tolerance ranges at ambient temperature of 68°F (20°C), starting from cold stats. The tripping time of the overload releases at operational temperature is reduced to approximately 25% of the values shown. Under normal operational conditions, all three phases of the RWs should be loaded.

Altitude & Temperature Derating

The derating of a RW overload relay has two possible factors:

1) Ambient temperature

- Temperature compensation requires applying a correction factor to the rated current must be reduced when ambient temperature is higher than 60°C (140°F).

2) Altitude

- Altitude compensation involves both the rated current and voltage.
- Current compensation requires applying a correction factor to the rated current when altitude exceeds 2,000m.
- For voltage, altitude limits the maximum operating voltage of the overload relay when altitude exceeds 2,000m.

Temperature Compensation		Current Correction Factor
149°F	(65°C)	0.94 x I _n
158°F	(70°C)	0.87 x I _n
167°F	(75°C)	0.81 x I _n
176°F	(80°C)	0.73 x I _n

Altitude	Current Correction Factor [I _u] (A)	Current Correction Factor
Up to 2,000m (6,667ft)	690	1.00 x I _n
Up to 3,000m (10,000ft)	550	0.96 x I _n
Up to 4,000m (13,333ft)	480	0.93 x I _n
Up to 5,000m (16,667ft)	420	0.90 x I _n

The derating of the permissible operating current for installation altitudes above 2,000m (6,667 ft) and ambient temperatures over 60°C (140°F) is calculated according to:

Total derating = Derating altitude x Derating ambient temperature

Example;

Altitude: 3,000 m (10,000 ft)

K1 = 0.96

Ambient temperature: 70°C (158°F)

K2 = 0.87

Total current derating = 0.96 x 0.87 = 0.84 x I_e

In this case, the maximum rated voltage we can connect to our RW overload relay is 550V.

In order to select the proper overload relay, you have to choose a device with a current range that accommodates:

Overload Setting Point = FLA motor / (K1 x K2)

As in the example above, K1 x K2 = 0.84

For a motor with FLA = 20 Amps

Overload Setting Point = 20 / 0.84 = 23.8 Amps

Operating Positions¹⁾

RW17D, RW27D, RW67D, RW117D, RW317D, RW407D

When mounting without contactor, the overload relays can be mounted at any position.

RW17D with CWC Series

As shown in the left figure below, the inclination can not exceed $\pm 30^\circ$ degrees for intended function of the contactor. Laterally, as shown in the right figure below, the mounting position is equivalent to 0° degrees - not requiring a correction factor on the dial of the relay. The assembly can work with mounting variations of 0° to 180° .

RW27D, RW67D, RW117D, RW317D, RW407

The mounting position shown in the left figure below is equivalent to 0° degrees - not requiring a correction factor on the dial of the relay. The assembly can work with mounting variations of 0° to 135° for each side, however, when mounting the relay above the contactor, position between 135° and 225° , is required a correction factor of +10% on the dial of the relay. Laterally, as shown in the right figure below, the inclination can not exceed $\pm 30^\circ$ for the intended function of the contactor.

Note:

¹⁾Please consult WEG for different mounting positions.

Solid-State Overload Relays

The new RW_E Solid State Overload relays are developed with cutting edge technology according to the most demanding standards worldwide. With its wide current range, the RW_E OL Relay can be used for protection of electric motors of different power ratings. This provides versatility and flexibility for manufacturers due to the possibility of standardization of control panels. This Solid State Overload Relay can be directly mounted on WEG Contactors for reliable and flexible motor starter units. The RW_E includes two independent built-in auxiliary contacts that assure the motor is switched off when a failure occurs.

Standard Features:

- 3-pole solid state overload relays with adjustable trip class: 10, 20 and 30
- Self-powered
- Wide adjustment range (5:1)
- Thermal memory
- Phase loss protection
- Phase unbalance protection
- Temperature compensated -4 °C up to +60 °C
- Manual (Hand), Automatic, and Remote reset modes
- Direct mounting to WEG contactors with no accessory
- Accessories available for separate mounting
- 1NO and 1NC built in auxiliary contacts

UL File No. E189202

Solid-State Overload Relay Catalog Number Sequence

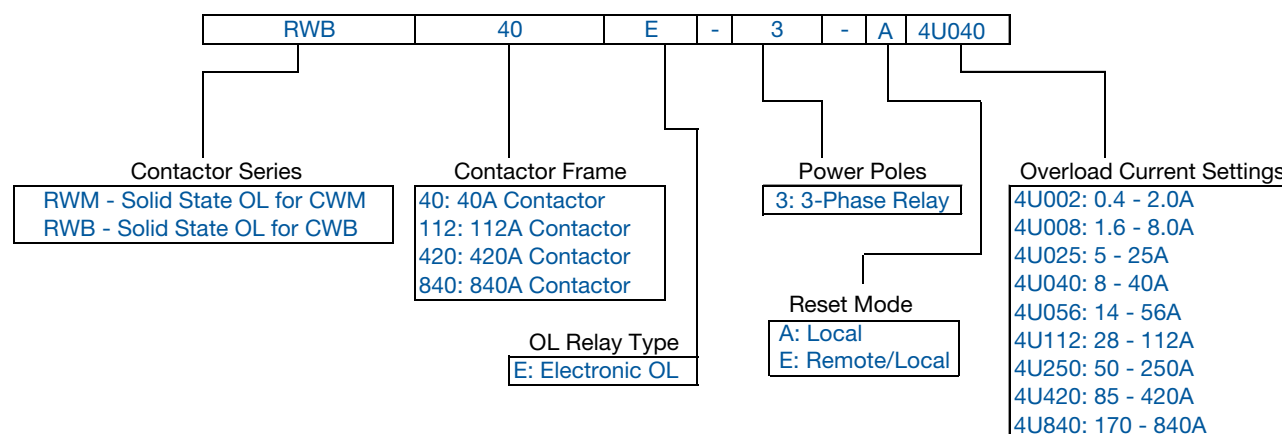

Chart intended as reference only and not to create part numbers.

RW-E Series - Solid State

Suitable for Great Variety of Applications

The solid-state overload relays RW_E are suitable to protect motors in a wide range of industrial applications including those where long starting time is required. Motors on low, medium or heavy duty applications can be properly protected just by selecting the proper trip class (10, 20 or 30 according to IEC 60947-4-1) with the DIP-switches.

Additionally, the microprocessed electronic circuits of RW_E are temperature compensated according to IEC 60947-4-1, which assures that, the tripping point is not affected and it performs consistently without undesirable tripping throughout the temperature range of -4 °F up to +140 °F.

The RW_E also features thermal memory which assures that the heating and cooling effects of motors are modeled and proper protection is guaranteed even after downtime periods.

Trip class	Multiples of current setting			
	1.05 x I _r	1.2 x I _r	1.5 x I _r	7.2 x I _r
10	-	Tp <2h	Tp <4min	4 <Tp ≤10s
20	-	Tp <2h	Tp <8min	6 <Tp ≤20s
30	-	Tp <2h	Tp <12min	9 <Tp ≤30s

IEC 60947-4-1

trip class dip-switch

Local and Remote Reset Modes

Solid state overload models with remote reset mode can be reset locally (at the panel) or remotely.

The Local Reset is performed by pressing the blue “RESET” button located on the front of the overload or by pressing an external Reset pushbutton (separate accessory) with shaft that can be wired and mounted on a panel enclosure.

The Remote Reset is performed by applying 24 VDC across terminals –A3 and +A4, by pressing an external pushbutton (separate accessory) or via a PLC’s digital output.

Note: The duration of the reset pulse must be greater than 0.25 seconds and must not exceed 5 seconds (typical = 1s).

	Operating		-20 °C...+60 °C			
	Temperature compensation		-20 °C...+60 °C			
Altitude			2,000 m			

Notes: 1) Direct mounting on contactor or directly on the panel via screws or 35 mm DIN rail when using the mounting kit accessory (BF27D and BF112)
 2) Direct mounting on contactor when using the Connector Link GA117 / GA317 accessory or directly on the panel via screws.
 3) Before performing a manual reset, it is recommended to wait at least 180 seconds for the load to cool down and for the system to recover after an overload occurs. Resetting the overload before the recommended time will not guarantee a proper re-activation of the system and may cause damages to the equipment.

SRW01

The main function of the SRW01 is to protect and control electric motors in their most diverse industrial applications. Due to its reduced size and modular design, the relay is frequently used when space for its assembly is a determining point. The on-line monitoring options, failure diagnosis, and failure statistics allow preventive maintenance to be more effective, thus reducing the number of downtimes. It covers wide applications for continuous process plants in a wide variety of market segments.

Standard Features

- Three ways to parameterize, program, and monitor:
 - Via network protocols
 - Via HMI (Human Machine Interface)
 - Via USB port with free WLP (WEG Ladder Programmer) software
- Standard 6 digital inputs and 4 digital outputs
- Status LED indicators for digital inputs, outputs, network, operating condition, failure, and alarm
- Digital Expansion Unit (EDU) for extra digital inputs and outputs
- Current Measuring Unit (UMC) for three-phase electric motors
- Current and Voltage Measuring Unit with Transformer (UMCT) for monitoring phase sequence, power factor, motor power, and power consumption

UL File No. E189202

SRW01-U C P T 1 E47

Communication protocols
 B = Without communication
 D = DeviceNet
 M = Modbus-RTU
 P = Profibus-DP
 E1 = Ethernet Modbus-TCP
 E2 = Ethernet PROFINET IO
 E3 = EtherNet/IP

Protection
 T = PTC
 E = Earth leakage
 TE = PTC and Earth leakage

Digital input operating voltage
 1 = 24 V dc
 2 = 110 V ac

Supply voltage
 E26 = 24 V ac (50-60 Hz) / V dc
 E47 = 110-240 V ac (50-60 Hz) / V dc

Chart intended as reference only and not to create part numbers.

Using the modular concept, SRW01 offers flexibility and easy configuration.

Digital Expansion Unit (EDU)

The Digital Expansion Unit (EDU) increases the number of digital inputs and outputs present in the Control Unit (UC) of the SRW01. The EDU adds 6 digital inputs and 4 digital outputs, and can be used to monitor signals and to control external devices.

Note: Limit of one Digital Expansion Unit (EDU) for each Control Unit (UC).

Current Measuring Unit (UMC) or Voltage and Current Measuring Unit (UMCT)

UMC

UMCT

The Current Measuring Unit (UMC) measures the current of the three phases of the motor.

Including a potential transformer, the Current and Voltage Measuring Unit (UMCT) also monitors voltages up to 690 V, allowing the smart relay to monitor phase sequence, power factor, motor power (active, reactive and apparent) and power consumption (kWh).

The data are digitally transmitted to the Control Unit (UC).

Connectivity

Its capacity of immediate diagnosis helps the preventive maintenance, avoiding undesirable machine breakdown, and also meeting the **IoT** requirements, which is one of the cornerstones of the **4.0 Industry**.

SRW01-UMC6

SRW01-UMCT6

Width (mm)	Current (A)	Power connection
265	84 - 840	Cable through or busbar

Images for illustrative purposes

For applications at higher currents or out of the model range of the Current Measuring Unit (UMC) or Current and Voltage Measuring Unit (UMCT), it is possible to use external current transformers (CTs) supplied by the user.

UC-UMC or UMCT / UC-EDU Connection Cable

The SRW01-CB cable makes the electrical connection of the Control Unit (UC) to the Current Measuring Unit (UMC) or Current and Voltage Measuring Unit (UMCT) or Digital Expansion Unit (EDU), allowing the detached assembly up to two meters away and simplifying the installation.

Catalog Number	Length (mm)	List Price	Multiplier
SRW01-CB0	60	\$13.50	Z8
SRW01-CB1	120	\$13.50	
SRW01-CB2	500	\$15.50	
SRW01-CB3	2,000	\$17.50	
SRW01-CB4	1,000	\$17.50	

Notes: 1) Alternating supply voltage from 35 to 690 V.

2) For a current range from 0.25 to 2.5 A, use the SRW01-UMC1 or SRW01-UMCT1 with two turns in the primary winding. For further details, refer to the user's manual.

Smart Relays Accessories

Digital Expansion Unit - EDU

Catalog Number	Digital inputs	Digital input (external) supply voltage	Digital outputs	List Price	Multiplier
SRW01-EDU1	6	24 V dc	4	\$440	Z8
SRW01-EDU2	6	110 V ac	4	\$440	

Human Machine Interface - HMI

The HMI is connected to the front part of the relay by means of a communication cable, making its operation and configuration easier and more convenient. It offers two mounting options: vertical and horizontal.

Catalog Number	Description	List Price	Multiplier
SRW01-HMI	Standard human machine interface - HMI - vertical	\$250	Z8

Catalog Number	Description	List Price	Multiplier
SRW01-HMI2	Human machine interface - HMI - horizontal	\$470	Z8

Earth Leakage Sensor (EL)

The Earth leakage sensor must be installed detached from the Control Unit (UC).

It can be installed in any position and connected to the Control Unit (UC) by means of a twisted pair and/or shielded cable connected to the sensor terminals and S1 and S2 terminals, for the model with Profibus-DP, DeviceNet and Modbus-RTU, or to the other E1 and E2 terminals for the EtherNet/IP, PROFINET IO and Modbus-TCP models, with maximum recommended distance of 10 m.

Catalog Number	Diameter (mm)	UMC/UMCT compatible	List Price	Multiplier
SRW01-EL1	35	SRW01-UMC/UMCT 1, 2, 3	\$265	Z8
SRW01-EL2	70	SRW01-UMC/UMCT 4	\$460	
SRW01-EL3	120	SRW01-UMC/UMCT 5	\$825	
SRW01-EL4	210	SRW01-UMC/UMCT 6	\$1,670	

Specify the Earth leakage sensor according to the diameter of the cables that go through the window; choose the sensor with the smallest opening.

It is recommended to use the equivalence relation between the Current Measuring Unit (UMC) or Current and Voltage Measuring Unit (UMCT) and the ELS sensors for the installation, as shown on the table above.

Accessories

Connection Cable UC-HMI

CPTW Series

The WEG CPTW Series Control Power Transformers are designed to accommodate the momentary current inrush associated with electromagnetic components in industrial applications. The CPTW product line ranges from 50 to 5000 VA. The high-grade silicon steel laminations and completely encapsulated core are designed to optimize performance and meet or exceed UL, cUL, CSA, and CE standards. The CPTW line offers the quality, reliability, and uncompromising performance that you have come to expect from WEG.

E535994

Standard Features

- Completely encapsulated coils for maximum protection against moisture, dirt, dust, and contaminants in industrial environments.
- Built-in, finger-safe terminals provide up to 30% greater terminal contact area and permit low-loss connections.
- Extra deep barriers reduce the chance of shorts from frayed leads or careless wiring.
- Phil-Slot-Hex head terminal screws designed to accept bare wire, ferrules, spade or ring lugs.
- Molded terminals result in a more robust and compact design.
- Fully threaded quarter-inch long terminal screws prevent stripping and pullouts.
- High-grade silicon steel laminations reduce energy losses through eddy currents.
- High-grade silicon steel cores are machine wound with copper magnet wire for increased electrical resistivity and durability.
- Mounting plate is heavy gauge steel to add strength and provide stability.
- All transformers up to 750VA come standard with secondary fuse clips for quick and easy fusing.
- CPTW transformers are developed in compliance with UL, cUL, CSA, and CE standards.

CPTW

How to select the proper transformer.

Transformer selection requires the following information.

- **Inrush VA** is the product of Load Voltage (V) multiplied by the current (A) that is required during circuit start-up. It is calculated by adding the Inrush VA requirements of all devices (contactors, timers, relays, pilot lights, solenoids, etc.), which will be energized together. Inrush VA requirements are best obtained from the component manufacturer.
- **Sealed VA** is also called Steady State VA and is the product of Load Voltage (V) multiplied by the current (A) after initial start-up or under normal operating conditions. It is calculated by adding the Sealed VA requirements of all electrical components that will be energized at any given time. Sealed VA requirements are best obtained from the component manufacturer.
- **Primary voltage** is the voltage available from the electrical distribution system and its operational frequency. This is the power which is connected to the transformer supply voltage terminals.
- **Secondary voltage** is the voltage required for load operation. This is the power which is available from the transformer load voltage terminals.

Once that information is known, the steps are as follows:

1. Calculate the total Inrush VA of the application by using the following formula:

$$\text{Application Inrush VA} = \sqrt{(\text{Inrush VA})^2 + (\text{Sealed VA})^2}$$

2. Refer to the Inrush Regulation Data Chart below. If the primary voltage is stable and does not vary by more than 5% from nominal, the 90% secondary voltage column should be used. If the primary voltage varies between 5% and 10% of the nominal voltage, the 95% secondary voltage column should be used.
3. After determining the proper secondary voltage column, read down until a value equal to or greater than the application inrush VA is found. In no case should a figure less than the application inrush VA be used.
4. Read left to the Transformer VA Rating column to determine the proper transformer rating for this application. As a final check, make sure that the Transformer VA Rating is equal to or greater than the total sealed requirements. If not, select a transformer with a VA rating equal to or greater than the total sealed VA.

Inrush Regulation Data Chart

Continuous VA Transformer Rating	Secondary Voltage		
	85%	90%	95%
50	200	167	131
75	311	257	200
100	471	377	276
150	923	716	491
200	1125	883	622
250	1944	1476	970
300	2040	1547	1020
350	3300	2400	1400
500	3191	2500	1745
750	6025	4520	2915
1000	8100	5600	3000
1500	16000	12000	6600
2000	19500	13500	7300
3000	25500	18250	10500
5000	75000	56000	33000

Notes:

- Inrush VA assessed at 0.4 Power Factor.
- To comply with NEMA standards, which require all magnetic devices to operate successfully at 85% of rated voltage, the 90% secondary voltage column is most often used in selecting a transformer.

Enclosed Starters

Operation and Protection of Motors up to 600Hp at 460Vac (800A)

WEG enclosed starters series were designed to meet the requirements and flexibility frequently demanded in industrial applications. Featuring components that meet IEC design standards and UL horsepower ratings, WEG enclosed starters are UL508A approved and cULus certified. This means your panels will fulfill the rigorous requirements of UL508A and will have the quality and performance as for all WEG products

Standard or Custom

By having most of the processes in WEG facilities, we can manufacture not only the enclosed starters listed on this catalog, but also any other custom panel your application may require. Our Engineers will work together with you to provide the perfect solution for your application.

Perfect Solution

WEG offers options for both: Full Voltage Non-Reversing Non-Combination Starters and Full Voltage Non-Reversing Combination Starters up to 250Hp at 460Vac.

WEG's UL508A panel shops can manufacture any configuration of Non-Combination or Combination Starters for any low voltage horsepower ratings. Some examples are listed below:

- Enclosed Contactors
- Full Voltage Reversing Starters
- Reduced Voltage Magnetic Starters (Part-Winding, Wye-Delta)
- Reduced Voltage Solid-State Starters
- Multi-Speed Starters
- Explosion Proof Starters

Whenever you need a reliable product to control & protect your application, WEG field specialists can help you find the best solution.

New Concepts

Smaller size components allow selection of smaller enclosures which translates to cost savings. A wide range of ratings and frames allow the components to be more closely matched to your application. Our overload relays provide phase loss sensitivity, ambient temperature compensated for -4°F to +140°F (eliminating the need for additional heaters), and automatic reset for remote applications.

A wide range of industrial applications are covered: Pumps, Industrial Washing Machines, Compressors, Blowers, Cutting Machines, Conveyors, Lumber Processing and many others.

Enclosed Starters

Non-Combination Starters

ESW/PESW

WEG offers non-reversing and non-combination magnetic starters up to 75HP at 460Vac (105A). Featuring components that meet IEC design standards and UL horsepower ratings, incorporating WEG contactors and overload relays, the magnetic starters are ideal to protect and operate motors, ensuring smooth operation year-after year.

UL File No. E202315

Three series are available:

- Metallic Type 1 – ESW Series
- Non-Metallic Type 4X – PESW Series
- Cast Aluminum NEMA 4X/7/9 - ESWX Series

WEG ESW and PESW starters are pre-wired from the factory and recommended for all single and three phase applications where magnetic starters can be applied.

Standard Features

- High horsepower ratings in four compact sizes
- Fast acceleration and high initial torque
- Bimetallic Overload Relays – class 10
- Adjustable trip current
- Ambient temperature compensated
- Phase-loss sensitivity protection
- Selectable Manual or Automatic RESET
- Electrically isolated NO-NC auxiliary contacts
- Easy to install and setup

	1 x 1" and 1 1/4"	1 x 1" and 1 1/4"	-

For wall mounting on starters size 08 and 10, four screws with the following characteristics should be used:

- Pan, dome or rounded shaped head;
- Starter size 08:
 - Screws size 1/4 (or M6 – ISO Standard);
 - Dimensions: diameter thread shall be maximum 1/4 in and diameter head shall be maximum 15/64 in.
- Starter size 10:
 - Screws size 1/2 (or M5 – ISO Standard);
 - Dimensions: diameter thread shall be maximum 0.236 in and diameter head shall be maximum 0.394 in.

ESWC Series Combination Starters (Three Phase)

High performance and optimized solutions for motor starting and control. WEG offers full voltage non-reversing combination starters, ESWC series, up to 250 HP at 460VAC (300A) with control power transformers for three-phase applications.

Standard Features

- Multi-Rated Enclosure Type: 1/3R/4/12
- Multi-Voltage Transformer: primary 208V/230V/460V – secondary 120V
- Branch Disconnect: rotary through-the-door handle
- Short-Circuit Protection: molded case circuit breaker
- Motor Control: magnetic IEC contactor
- Overload Protection: solid-state overload relay
 - *Selectable trip class 10, 20, 30
 - *(5:1) ratio adjustable current setting
- Standard Control Devices: RESET, START, STOP, HOA, and RUN LIGHT
- Custom control options available upon request

ESWC

ESWC Series – Full Voltage Non-Reversing Combination Starter (Three Phase)

- Branch Disconnect with Rotary Handle
- Reset, Start, Stop, HOA, and Run Light Control available as Options
- Magnetic Contactor and Solid State Overload
- Transformer 208,240 and 480VAC Primary with 120VAC Secondary, 600VAC version also available

ESWE

ESWE Series Combination Starters Type E with/without CPT

High performance and optimized solutions for motor starting and control. WEG offers full voltage non-reversing combination starters, ESWE series, up to 20 HP at 460VAC (40A) with or without control power transformers for three-phase applications.

Standard Features

- Standard Enclosure Type: non-metallic 4X
- Control Power Transformer: with or without
 - *CPT primary 575V – secondary 120V
 - *CPT primary 480V/240V – secondary 120V
- Branch Disconnect: rotary through-the-door handle
- Short-Circuit Protection: manual motor protection
- Motor Control: magnetic IEC contactor
- Overload Protection: manual motor protection
- Standard Control Devices: HAND-OFF-AUTO switch, START and STOP pushbuttons, pilot lights
- Custom enclosure and control options available upon request

ESWE Part Number Breakdown

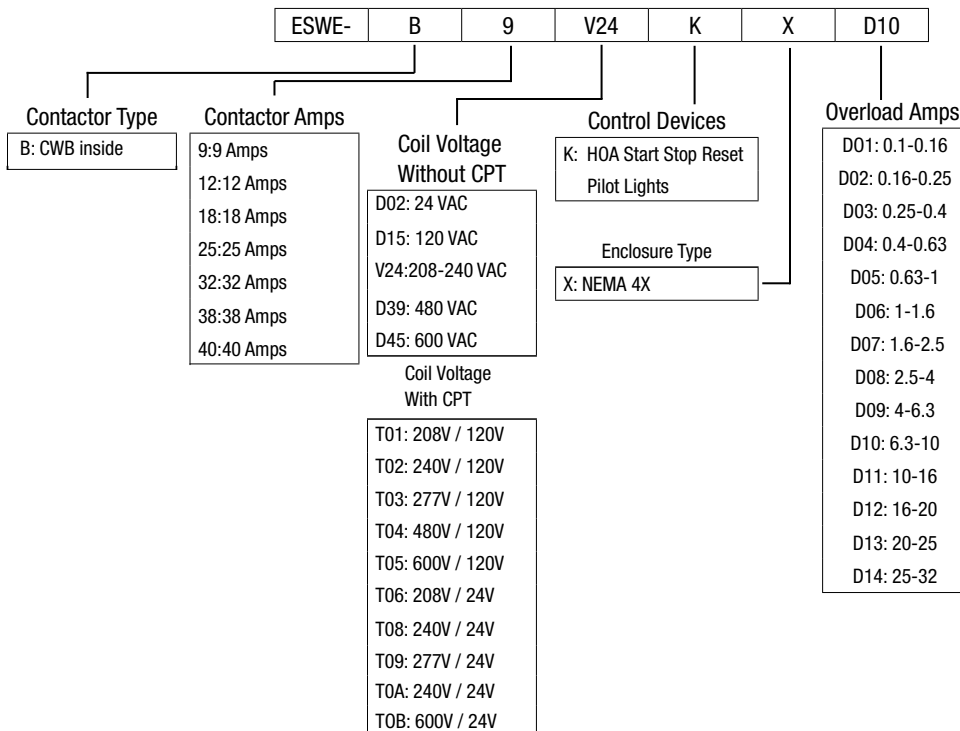

Chart intended as reference only and not to create part numbers.

Combination Type-E Across The Line Starter

- Branch Disconnect: Rotary through-the-door Handle
- Short-Circuit Protection: Manual Motor Protection
- Motor Control: Magnetic Contactor
- Overload Protection: Manual Motor Protection
- Control Devices: Hand-Off-Auto switch, Start-Stop pushbutton, pilot lights
- Other enclosure options available upon request

Notes:

- 1) Please contact your local WEG representative for starters with 575V coil voltage.
- 3-phase starters with 120V coil are pre-wired for separate control
- 3-phase starters can be wired for single-phase applications

Motor Control for Hazardous Areas: Class I, Groups C & D - Class II, Groups E, F, G

WEG Explosion Proof Motors Starters are the perfect compliment for motor control in Hazardous and Industrial environments. Applications include Oil & Gas, Mining, and Chemical Processing industries.

ESWX-M Series - Enclosed Manual Motor Starters

- High short-circuit interrupting rating – up to 50kA @ 480V
- Thermal overload protection Class 10
- Phase loss sensitivity protection
- Ambient temperature compensation -4°F+140°F (-20°C +60°C)
- Lockable rotary handle mechanism for disconnect
- Snap-in accessories
- Finger safe protected terminals
- Test trip feature
- Manual Motor Starters
- Suitable for motor disconnect applications
- UL Type-E self protected combination starter (available on request)

ESWX Series - Enclosed Starters

- Copper free aluminum alloy body
- Bolted flange design
- Durable cast on lugs
- Watertight 'O' Rings for NEMA 4 applications
- Hinged door for easier access
- NEMA 7 / 9 housing
- Class I, Groups C & D - Class II, Groups E, F, G
- Starter includes contactor plus overload relay
- Start Stop Reset buttons (Standard)
- HOA or Pilot Light (optional)
- Available up to 75 hp @ 460 Vac – 100 amps
- NEMA rated starters available from size 00 to size 3 on request

Custom units also available on request.

ESWX

ESWX-M25 Series

- NEMA 4X / 7 / 9 housing
- Hinged Cover for easy access
- ON / OFF – Rotary Handle
- Lockable in OFF position
- Available up to 20 hp @ 460 Vac– 32 amps

Notes:

- Overload Relay dial must be set with FLA of the motor
- 3-phase starters with 120V coil are pre-wired for separate control
- 3-phase starters can be wired for single-phase applications

When completed, please contact your regional WEG sales specialist at 1-800-ASK-4WEG (275-4934) for directions on submittal.

Electronic Relays

Timing Relays RTW17 and ERWT

Protection Relays RMW17, RPW and ERWM

Level Relays RNW

WEG comprises three different series under the category Electronic Relays:

- Timing Relays (RTW17 and ERWT)
- Protection Relays (RMW17, RPW and ERWM)
- Level Relays (RNW)

These Electronic Relays of the Modular Line are manufactured in a compact 17.5 mm wide frame with 2 “form C” output relay. All units utilize high precision electronic circuits with line noise immunity, low energy consumption and are equipped with reliable LEDs for status indication. The units can be directly mounted on DIN rail 35mm or with screws. They are effective and a safe solution for industrial, commercial and residential applications.

The line offers many timing options for applications of motor control and starting, industrial and commercial automation, as well as specific functions for lighting system control and voltage monitoring.

Standard Features:

- High precision electronic circuit with noise immunity
- Low energy consumption
- LED status indication
- Compact 17.5 mm wide size frame
- Direct mounting on DIN rail 35 mm or fixed with screws
- Applications in industrial or residential environments
- Suitable for installation in distribution boards, industrial panels and motor starters
- Designed according to the following standards:
 - IEC / EN 60947-1
 - IEC / EN 60947-5-1
 - IEC / EN 61812
 - UL 508 CAN / CSA C22.2

UL File No. E189202

Timing Relay RTW17 and ERWT

WEG timing relays allow switching of an output signal according to the timing function and selected time. Setting time ranges from 0.1s to 10 days. The relays come in a compact 17.5 mm wide frame and can be mounted directly on DIN rail 35 mm or fixed by screws. Available with 2 “form C” output relay.

Ideal for applications such as industrial processes, automation and motor starters. The relays can also be used in residential and commercial applications.

Timing Functions

- RTW17-A - ON-delay
- RTW17-E - Impulse ON
- RTW17-G - Star-Delta
- RTW17-Ba - OFF-delay with external command
- RTW17-Da - Symmetrical flasher, starts with pulse ON
- RTW17-Db - Symmetrical flasher, starts with pulse OFF
- RTW17-Dc - Asymmetrical flasher, starts with pulse ON
- RTW17-Dd - Asymmetrical flasher, starts with pulse OFF

Multifunction Timer Features

- Multifunction Timers – 2 different types
- Up to 8 functions in one timer
- Multi-Voltage, 24-240 Vac/Vdc

Timing Relay Catalog Number Sequence

RTW17 - A 02 - U001S - E05

RTW17	Single or multiple timing relay
ERWT ^{2,3}	Multifunction timing relay

Selection of the function

A	ON-delay ^{1,3)}
E	Impulse ON ^{1,3)}
G	Star-Delta ^{1,3)}
Ba	OFF-delay with external command ³⁾
Da	Symmetrical flasher, starts with pulse ON ³⁾
Db	Asymmetrical flasher, starts with pulse OFF ³⁾
Dc	Asymmetrical flasher, starts with pulse ON
Dd	Asymmetrical flasher, starts with pulse OFF
MF1	8 configurable functions ^{2,4)}
	ON-delay
	ON-delay with control signal
	ON-delay and OFF-delay with control signal
	Symmetric flasher, start ON
	Asymmetric flasher, start OFF
	Impulse ON with control signal
	Star-delta
MF2	8 configurable functions ^{2,4)}
	Asymmetric flasher, start ON
	Asymmetric flasher,]start OFF
	Percentage flasher, start ON
	Percentage flasher, start OFF
	Flasher for motor reversing
	ON-delay and OFF-delay with control signal and independent settings
	Delayed adjustable-length pulse
	Bistable

Power Supply

E05	24-240 Vac / Vdc
D90	208-480 Vac ¹⁾

Timing

U001S	0.1 to 1 second
U003S	0.3 to 3 seconds
U010S	1 to 10 seconds
U030S	3 to 30 seconds
U060S	6 to 60 seconds
U100S	10 to 1,000 seconds
U300S	30 to 300 seconds
U010M	1 to 10 minutes
U030M	3 to 30 minutes
U060M	6 to 60 minutes
MAT ³⁾	0.1s to 10 days ^{1,2)}

Number of contacts

02	DPDT (2 NO/NC)
----	----------------

- 1) D90 - 208-480 Vac only for functions RTW17-A, E and G
- 2) MF1 and MF2 available only for ERWT multifunction relays
- 3) MAT multiple timing models available only for RTW17-A, E, G, Ba, Da, Db models.
- 4) Multiple timing models available only at voltage E05 - 24-240 Vac / Vdc.

Timing Relays - Multi-Voltage & Multi-Timing

Function / Description	Output Contacts	Voltage	Timing	Catalog Number	List Price	Multiplier
On-Delay	DPDT (2NO/NC)	24-240 Vac 50Hz/60Hz 24-240 Vdc	0.1 sec - 10 days	RTW17-A02MATE05	\$103	Z7
Off-Delay with external command	DPDT (2NO/NC)	24-240 Vac 50Hz/60Hz 24-240 Vdc	0.1 sec - 10 days	RTW17-BA02MATE05	\$103	
Impulse ON	DPDT (2NO/NC)	24-240 Vac 50Hz/60Hz 24-240 Vdc	0.1 sec - 10 days	RTW17-E02MATE05	\$103	
Star-Delta	DPDT (2NO/NC)	24-240 Vac 50Hz/60Hz 24-240 Vdc	0.1 sec - 10 days	RTW17-G02MATE05	\$90	
Symmetrical Flasher - Pulse (Start ON)	DPDT (2NO/NC)	24-240 Vac 50Hz/60Hz 24-240 Vdc	0.1 sec - 10 days	RTW17-DA02MATE05	\$90	
Symmetrical Flasher - Pulse (Start OFF)	DPDT (2NO/NC)	24-240 Vac 50Hz/60Hz 24-240 Vdc	0.1 sec - 10 days	RTW17-DB02MATE05	\$90	
Multifunction - MF1						
ON-delay	DPDT (2NO/NC)	24-240 Vac 50Hz/60Hz 24-240 Vdc	0.1 sec - 10 days	ERWT-MF1-02MT1E05	\$175	Z7
ON-delay with control signal						
ON-delay and OFF-delay with control signal						
Symmetric flasher, start ON						
Asymmetric flasher, start OFF

Timing Relays

Operation Modes

Single Timing Models (RTW17) or Multiple Timing (RTW17-MAT)

Operating mode	Timing diagram
<p>RTW17-A (ON – Delay) – Connecting a supply voltage on terminals A1-A2 / A3-A2, the selected time delay begins with the output relay remaining de-energized and LED (power supply “U”) pulses green during the time delay. After the end of the delay time, the output relay energizes (red LED R1 and R2 turns on) and remains energized until the supply voltage is removed. This can be repeated as often as required.</p> <p>Reset: Removing supply voltage resets the time delay and the output</p>	
<p>RTW17-E (Impulse ON) – Connecting a supply voltage on terminals A1-A2 / A3-A2, the green LED (power supply “U”) pulses and the output relay energizes without delay (red LED R1 and R2 turns on). The output remains energized until the selected pulse time elapse, the red LED R1 and R2 turns off and the green LED (power supply “U”) goes solid. This can be repeated as often as required.</p> <p>Reset: Removing supply voltage resets the time delay and the output.</p>	
<p>RTW17-Ba (OFF-delay with external command) – This function requires continuous supply voltage on terminals A1-A2 / A3-A2, the green LED (power supply “U”) turns on and timing is controlled by a command contact at terminals A2-B1. If the command contact is removed the selected time delay begins. When the selected time elapse the output relay is de-energized (red LED R1 and R2 turns off). This can be repeated as often as required.</p> <p>Reset: Removing supply voltage resets the time delay and the output.</p>	
<p>RTW17-Da (symmetrical flasher, starts with pulse ON) – Connecting a supply voltage on terminals A1-A2 / A3-A2 the green LED (power supply “U”) pulses and the output relay (R1 and R2) are activated. After the time set in the selector switch has elapsed, the output relay is deactivated. This continues with in symmetric ON/OFF cycles. The single dial presets a fixed ON and OFF time.</p> <p>Reset: Removing supply voltage resets the time delay and the output.</p>	

Operation Modes

Single Timing Models (RTW17) or Multiple Timing (RTW17-MAT)

Operating mode	Timing diagram
<p>RTW17-Db (symmetrical flasher, starts with pulse OFF) – Connecting a supply voltage on terminals A1-A2 / A3-A2 the green LED (power supply “U”) pulses and the output relay (R1 and R2) remain deactivated. After the time set in the selector switch has elapsed, the output relay is activated. This continues with symmetric OFF/ON cycles. The single dial presets a fixed ON and OFF time.</p> <p>Reset: Removing supply voltage resets the time delay and the output.</p>	
<p>RTW17-Dc (asymmetrical flasher, starts with pulse ON) – Connecting a supply voltage on terminals A1-A2 / A3-A2 the green LED (power supply “U”) pulses and the output relay (R1 and R2) is energized. The timer starts to pulse with adjustable ON/OFF cycles. The upper dial presets the ON time (red LED R1 and R2 turns on and output relay are energized) and the lower dial selects the OFF time when the output relay is de-energized.</p> <p>Reset: Removing supply voltage resets the time delay and the output.</p>	
<p>RTW17-Dd (asymmetrical flasher, starts with pulse OFF) – Connecting a supply voltage on terminals A1-A2 / A3-A2 the green LED (power supply “U”) pulses and the output relay (R1 and R2) remain de-energized. The timer starts to pulse with adjustable ON/OFF cycles. The upper dial presets the ON time (red LED R1 and R2 turns on and output relay are energized) and the lower dial selects the OFF time when the output relay is de-energized.</p> <p>Reset: Removing supply voltage resets the time delay and the output.</p>	
<p>RTW17-G (star-delta) – Connecting a supply voltage on terminals A1-A2 / A3-A2 the output contact for the star-connection energizes and the adjusted time starts (red LED R1 turns on and output contact is energized). When the start-up time elapses, a fixed star-delta changeover time of 100ms starts and this star-delta changeover time elapses the output contact for the star-connection (R1) de-energizes and the delta-connection (R2) energizes and stayed energized until supply is disconnected.</p> <p>Reset: Removing supply voltage resets the time delay and the output.</p>	

Note: MAT multiple timing functions available only for RTW17-A, E, Ba, Da, Db, G models.

$3,000 < h \leq 4,000$ m	0.77	$0.90 \times I_n$
$4,000 < h \leq 5,000$ m	0.67	$0.85 \times I_n$

Protection Relays RMW17, RPW and ERWM

WEG protection relays are designed to supervise and monitor three-phase and single-phase power supplies, interrupting the process of operation whenever an anomaly occurs. They can switch off circuits and activate safety devices and alarms in order to protect machines and equipment against faults on the power supply according to the settings.

Some anomalies in electric installations that could occur are overvoltage, undervoltage, phase loss, and phase sequence. Overvoltage or phase loss can overheat machinery and motors, thus reducing the lifetime. Phase sequence inversion can cause machinery to run in the wrong way, possibly destroying the entire system. Undervoltage may occur causing machinery to run in an undefined range, which could cause some parts of the system to run properly while others cease operating.

Protection Functions

- RMW17-FF – Phase Loss Relay
- RMW17-SF – Phase Sequence Relay
- RMW17-FSF – Phase Loss and Sequence Relay
- RMW17-SS – Three-Phase Undervoltage and Overvoltage Relay
- RMW17-SSM – Single-Phase Undervoltage and Overvoltage Relay
- RPW-PTC – Thermistor Relay

RMW17-FF – The Phase Loss Relay is used to monitor three-phase networks against phase failure.

RMW17-SF – The Phase Sequence Relay is used to monitor three-phase networks against incorrect phase sequence.

RMW17-FSF – The Phase Loss and Phase Sequence Relay is used to monitor three-phase networks against phase loss and incorrect phase sequence.

RMW17-SS – The Three-Phase Undervoltage and Overvoltage Relay is used to monitor the maximum and minimum variations that three-phase power supplies are able to work. The RMW17-SS also protects the circuit against phase unbalance (asymmetry) of 20% or higher between phases.

RMW17-SSM – The Single-Phase Undervoltage and Overvoltage Relay is used to monitor the maximum and minimum variations that single-phase power supplies are able to work. The RMW17-SSM also protects the circuit against phase unbalance (asymmetry) of 20% or higher between phases.

RPW-PTC – The Thermistor Relay is used to measure the motor temperature by using PTC sensor inside of the motor. When the motor temperature rises above the PTC sensor class, the output relay is de-energized avoiding damages to the motor.

Operation Modes

Single Protection Models (RMW17/RPW)

Operating mode	Timing diagram
<p>RMW17-SS/SSM: Connected directly to the supply voltage to be monitored. Connected to terminals A1 and A2 (for the single-phase version) or terminals L1-L2-L3 (for the three-phase version) with phase amplitudes within the selected values and asymmetry between them below the threshold (20%), the output relay energizes (closing the 15-18 terminals) and the red LED (relay "R") turns ON. In case of a phase loss, asymmetry between phases higher than 20% or under and over-voltage, the output relay remains de-energized (closing the 15-16 terminals) and the red LED (relay "R") is turns OFF.</p>	
<p>RPW-PTC: Connected directly to the supply voltage and in series to the PTC (Positive Temperature Coefficient) sensor (maximum of 3 sensors). The output relay is automatically energized (closing the 15-18 terminals) and turns on the red LED (relay "R") indicating that the temperature is within acceptable values. If an over temperature occurs, the probe resistance is rapidly increase and the output relay is de-energized (closing the 15-16 terminals) and the red LED (relay "R") turns OFF, remaining on this situation until the temperature decreases at a normal value. The RPW PTC is able to evaluate if the PTC sensor has a fault (not caused by an over temperature) or if it is not connected (open circuit). In such situations, the green LED will start flashing.</p>

Protection Relays

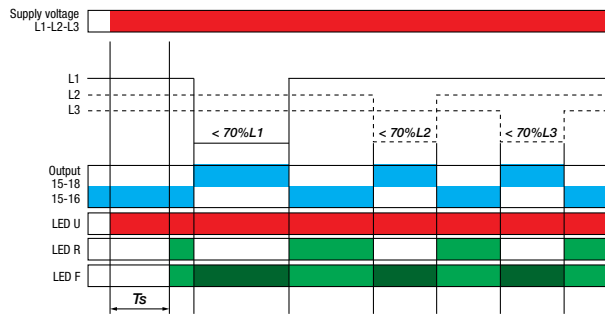

Operation Modes

Multiple Protection Models (ERWM-VM1 / VM2)

Operating mode

PF (phase loss) – It occurs when the voltage of one of the phases drops below 70% of the supply voltage. The maximum time delay is 350 ms for both the fault detection and the return of the ERWM to normal operation.

Timing diagram

>Un (overvoltage) – It occurs after the rated tripping voltage (U_n) (208 to 480 V) and the tripping overvoltage percentage (>Un) (3 to 15%) are selected. The time delay is defined by the time scale (1 to 30 s) or disabled (OFF) acting in a maximum of 350 ms. The selected time delay is for both the fault detection and the return of the ERWM to normal operation.

Timing diagram

Asy (unbalance) – It occurs when the voltage of one, two or three of the phases vary, calculating the average value of the three phases and also the greatest voltage variation value by the average value. The worst voltage variation case is taken into account in the unbalance calculation. The time delay is defined by the time scale (1 to 30 s) or disabled (OFF) acting in a maximum of 350 ms. The selected time delay is for both the fault detection and the return of the ERWM to normal operation.

Timing diagram

Operating mode

PS (phase sequence) – It occurs when the phases are not connected in the correct sequence (L1-L2-L3) or even when a phase inversion occurs during operation. The maximum time delay is 350 ms for both the fault detection and the return of the ERWM to normal operation. Only the ERWM-VM1 measures phase sequence.

Timing diagram

<Un (undervoltage) – It occurs after the rated tripping voltage (U_n) (208 to 480 V) and the tripping undervoltage percentage (<Un) (-3 to -15%) are selected. The time delay is defined by the time scale (1 to 30 s) or disabled (OFF) acting in a maximum of 350 ms.

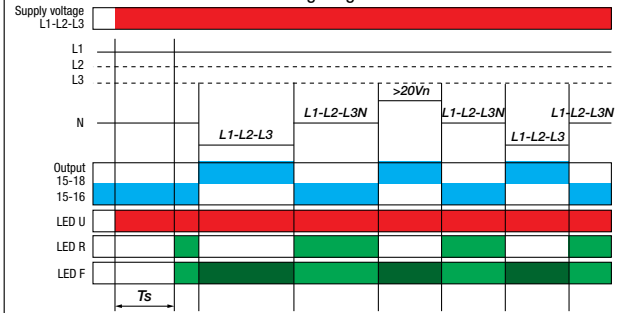

The selected time delay is for both the fault detection and the return of the ERWM to normal operation.

Timing diagram

ND (neutral detection) – It occurs when the Neutral is not connected or it is disconnected during operation, or also when the voltage rises above 20 V (due to unbalance in the power grid). The maximum time delay is 350 ms for both the fault detection and the return of the ERWM to normal operation. For neutral detection, it is necessary to provide a bridge between terminals A and B; otherwise, the neutral will not be monitored.

Level Relay RNW

WEG Level Relays are electronic control devices that enable the monitoring and automatic adjustment of levels in electric current liquid conductors. Widely used in general reservoir automation, the RNW relays can also be utilized in several applications such as prevention of dry pump operation, monitoring against filling tank overflow, activation of solenoids or alarms / lighting.

The operating principle is based on measuring the electrical resistance of the reservoir liquid through electrodes that work as liquid presence / absence sensors. To optimize their performance, the relay has a sensitivity DIAL enabling the electronic circuit to be adjusted to the liquid resistance.

Available in 2 functions, RNW-EN filling and RNW-ES draining, the level relay offers digital electronics that provide high precision, repeatability and noise resistance. The supply system is isolated from the electronic circuit therefore ensuring greater user safety. Designed in accordance with international standards, the RNW offers a safe and compact solution, in 22,5mm wide housing for assembly on 35mm DIN rail, with 1 output reversible contact(C form) and voltage supply range of 100-240 VAC/VDC.

Available in the following functions:

- RNW EN -> Filling
- RNW ES -> Draining

Level Relay RPW-Series Catalog Number Sequence

Table intended for reference only and not to create part numbers.

Product Selection

Function / Description	Output Contacts	Voltage	Catalog Number	List Price	Multiplier

Panel Mounting Kit	-	-	PLMP	\$0.50	Z4

SPDT - Single Pole Double Throw = 1N.O./N.C. changeover contact set

Sensitivity Adjustment

Liquid resistance can vary according to the liquid in question and the position of the electrodes. To adapt the electronic circuit to the liquid used, sensitivity must be adjusted through the DIAL located in the front part of the RNW, which has a graded scale without values.

To perform the sensitivity adjustment, all electrodes must be submersed into the reservoir liquid and the DIAL positioned at its limit anti-clockwise (less resistance). With the relay energized, the DIAL must be turned clockwise (greater resistance) until the relay output switches its contacts (the red LED must change status). To confirm the adjustment, the reference electrode C must be disconnected and then quickly reconnected, the relay must return to its previous status. If this not happen, a new adjustment must be performed. By doing this, the RNW will be adjusted to the ideal sensitivity point.

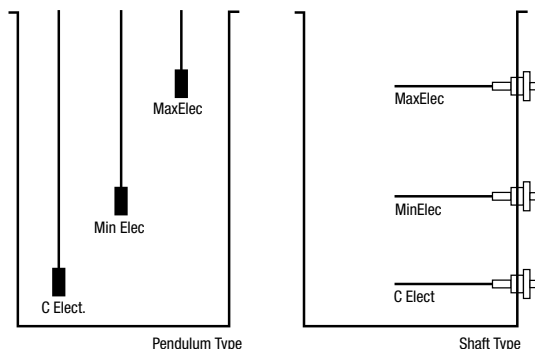

Relay Light Indications

The RNW Level Relay is equipped with indicator LEDs as shown on the right:

Functional Diagram

The electrodes are fixed in the reservoir according to desired control levels, minimum or maximum. The reference electrode (C) must be positioned in the lower part, below the maximum and minimum level electrodes. When the system is energized, an alternating current is applied to the reference electrode and, once the liquid comes into contact with the level electrodes, a path is established for the circulation of electrical current between the electrodes. An electronic current compares the current and switches the relay output contacts according to the chosen model (RNW ES or RNW EN). The electrodes are available in 2 versions, shaft (EHW) or pendulum (EPW), the difference between them is the assembly type. The RNW is available in two distinct functions, draining and filling.

Note: The EHW shaft sensors can be fixed both horizontally and vertically

Level Relays

Level Relays-RNW Series

RNW EN (Filling)

Controls 2 levels using 3 electrodes: the reference electrode (C), the maximum level electrode (Max) and the minimum level electrode (Min). Once powered, the RNW EN start monitoring the liquid level in the reservoir. With the electrode being uncovered at minimum level Min, the output relay will energize (terminals 15-18 closed) causing the liquid level to rise. When the reservoir liquid covers the Max level electrode, the output relay de-energize (terminals 15-18 open) and remains de-energized until the Min level electrode is discovered again. If there is a supply failure, the RNW EN will restart its initial logic.

Wiring Diagrams

Functional Diagram

RNW ES (Draining)

Controls 2 levels using 3 electrodes: the reference electrode (C), the maximum level electrode (Max) and the minimum level electrode (Min). Once powered, the RNW ES start monitoring the liquid level in the reservoir. With the liquid being in contact with the Max level electrode, the relay will energize (terminals 15-18 closed), causing the reservoir liquid level begin to drop. Once the Min level electrode is uncovered by the liquid the relay will energize (terminals 15-18 open) and will remain energized until the liquid enters into contact again with the Max level electrode, restarting the process. If there is a supply failure, the RNW ES will restart its initial logic.

Safety Relays

The WEG Safety Relays are devices that supervise circuits, providing instant and reliable monitoring of signals from safety devices. Ensuring the equipment/system and operator's safety. They are designed to meet the latest safety standards, always aiming at reaching the maximum efficiency and reliability in a single product. It is developed in compliance with TÜV Rheinland, CE, and UL standards.

Standard Features

- TÜV Rheinland certification
- Dual channel outputs
- LED status indication
- Direct mounting on DIN rail 35 mm
- Contact supervision
- Protected against faults and tampering
- Flexibility – suitable for different application types
- Lead-free products

CP Line – Emergency Stop Control

CS Line – Simultaneity Monitoring

Safety Relays CP Line – Emergency Stop Control

Standard Features

- 24 Vdc / Vac power supply
- Supervises contacts of different safety equipment types
- 3 NO safety outs
- 1 NC auxiliary output
- Dual channel
- Short circuit detection
- Feedback circuit
- Broken wire detection Cat 4 / PLe (ISO 13849-1), SIL CL 3 IEC 62061 / IEC 61508

CSW Series - 22mm

The WEG 22mm Pushbuttons and Pilot Device line uses leading edge technology and development. These user friendly pilot devices are used in many different industrial applications and environments.

Standard Features:

- Fast and Easy Assembly of Pushbuttons and Contact Blocks
- High efficiency self-cleaning contact blocks
- Long life Expectancy
- High Luminosity and color with the LED Lights
- Full line of accessories

High Performance Illuminated Blocks

The CSW line features the BIDL (integrated LED illuminated blocks) which offer high efficiency - lumens/Watt - with low thermal dissipation and energy consumption. The integrated construction guarantees high resistance against vibrations and maintenance-free operation.

CSW Series (22mm)

Decentralized Control Stations - PBW

Type 4x Protection

WEG control stations and emergency stop stations, also known as the PBW line, are available for a wide range of applications meeting the most demanding requirements of quality, robustness and modular design. The PBW line has been developed meeting the requirements of international standards such as IEC 60947-5-1, IEC 50102, IEC 60529 and UL 508 and can be used with WEG current pushbuttons and signaling units (CSW series).

Standard Features:

- IP66/Type 4x degree of protection: accurate design combined with a special sealing gasket assures the degree of protection throughout product life cycle
- Several cable entries: knock-out type entries on the top, base and side, meeting different cable glands with different threads
- Exclusive ID plate holding system: integrated to the construction, allows for standard CSW legend plates
- Captive screws: ensures safe and easy operations without losing hardware
- Premium polycarbonate construction: non-flammable and UV ray protected, its oversized thickness offers high mechanical resistance
- The PWB line is very cost effective, and inventory is always readily available.

IP66 degree of protection

Exclusive ID plate holding system

UL File No. E330817

	PBW control station	Pushbuttons	Contact blocks	Plate	Catalog Number	Weight (kg)	List Price	Multiplier
	Gray - 2 hole	Green, Flush, Non-Illumination - CSW-BF2 WH Red, Flush, Non-Illumination - CSW-BF1 WH	1NO + 1NC	White engraved "START" White engraved "STOP"	CSW PBW2-F2F111P17P1800	0.212	\$48	Z5

Notes: 1) Compatible with all single of the CSW line pushbuttons, selector switches and pilot lights. To avoid interferences and ensure the performance when use a mushroom pushbutton beside another pushbutton, WEG recommend maintaining an empty hole between the pushbuttons. To close the hole use the ATR accessory.

Energy consumption (V ac/dc)	10 mA
Rated impulse voltage U _i (IEC 60947-1)	2.5 kV
Operating temperature range	-25 °C...+70 °C / -13°F...+158°F
Average lifespan	100,000 hours
Brightness	Red 70 mcd
	Yellow 115 mcd
	White 275 mcd
	Blue 64 mcd
	Green 150 mcd
Terminal capacity (wire/cable with or without terminal)	Minimum (1 x 0.5 mm ²) and maximum (2 x 2.5 mm ²)
Tightening torque	0.8 N.m

Special Blocks (Illumination, Sockets, Voltage Reduction)

Applicable standards	IEC 60947-5-1, UL 508
Degree of protection (IEC 60529)	IP20
Rated impulse voltage U _i (IEC 60947-1)	4 kV
Operating temperature range	-25 °C...+70 °C / -13°F...+158°F
Terminal capacity (wire/cable with or without terminal)	Minimum (1 x 0.5 mm ²) and maximum (2 x 2.5 mm ²)
Tightening torque	0.8 N.m

Decentralized Control Stations

Applicable standards	IEC 60947-5-1, IEC 50102, IEC 60529, UL 508, UL 50
Certifications	CE
Degree of protection (IEC 60529)	IP66 (NEMA 4X)
Operating temperature range	-25 °C...+70 °C / -13°F...+158°F
Material	Polycarbonate (cover and base)
Cover color	Gray (RAL 7035) or Yellow (RAL 1003)
Base color	Black (RAL 9005)
Cable entry holes	ØM20 / PG13.5 / 1/2" and ØM16 / 3/8"
Use in ambient	External (UV rays) or internal

Assembly Configurations

Maximum Recommended Configuration of Contact Blocks for Each type of Head and Flange

Type of frontal part	Illuminated selector switch	Non-illuminated selector switch	Illuminated pushbuttons

Pushbutton and Pilot Light - CSW30 Series (30mm)

The WEG 30mm pushbuttons, selector switches, and indicators have been designed to offer the ruggedness required for severe industrial applications and environments. These modular devices offer superior quality at an affordable price.

Our hazardous duty series CSW30H also offers a wide selection of operators and pilot devices for hazardous duty applications (Class 1, Division, 2 and Zone 2). This series offers a wide selection of hermetically sealed reed and factory sealed contact blocks for superior corrosion resistance.

Standard Features

- NEMA 4, IP65 Rated;
- Fits 1-13/64 (30.5mm) hole without notch required
- Contact blocks snap-in (fast & easy assembly)
- Up to 8 contact blocks for non-illuminated operators and up to 4 contact blocks for illuminated operators
- LED lamps with built-in leakage protection
- Same simple part numbering system as 22mm series

UL File No. E330817

Auxiliary Contacts

Our standard contact blocks are color coded for easy circuit identification to minimize wiring errors. WEG's contact blocks are stackable up to 4 deep (for a total of up to 8 circuits per operator) without the need of any additional accessory. Combining different contact blocks types enable several functions to be achieved.

Technical Data

Electrical Ratings - 30mm Industrial Pilot Devices

Lamp	Industry Number	Rated Volts	Lumens (MSCD)	Design Life (Hrs.)	Current Draw (mA)	Lamp Type	Shock & Vibration	Leakage Protection
BIDL6	**	6V	Varies w/ Color	100,000	50	LED	Excellent	14 mA
BIDL12	**	12V	Varies w/ Color	100,000	<20	LED	Excellent	4 mA
BIDL24	**	24V	2000 MSCD	100,000	<20	LED	Excellent	4 mA
BIDL130	**	120/130V	Typical	100,000	<10	LED	Excellent	2 mA

*Specify lamp color when ordering.

Dielectric Strength (Terminal to Ground) 2200V for 1 Minute

Standard Contacts	Current Type	IEC	UL	Make Rating	Break Rating	lth-Thermal Current
BC10-CSW30 BC01-CSW30 BCA10-CSW30 BCR01-CSW30	AC	AC-15	A600	7200VA	720VA	10A
	DC	DC-13	P300	138VA	138VA	5A

Note:

- For AC voltage below 72V AC the max. allowed switching current is 10A = lth.
- For DC voltages below 28V DC the max. allowed switching current is 5A =lth.
- For switching applications below 24V/40mA - Hermetic REED contacts are recommended. Hermetic Reeds are also excellent in environments containing chemical vapors, oxidizing agents, and explosive gases.
- Please refer to the HAZARDOUS section of the 30mm devices for more information.

Environmental Ratings

Operating Temperature
-40 to +131° F (-40 to +55° C)

Storage Temperature
-40 to +185° F (-40 to +85° C)

Operating environments below freezing temperatures are assumed to be absent of freezing liquids or pollutants.

CSW30H Series (30mm) Hazardous Duty

General Standards

WEG hazardous duty series CSW30H also offers a wide selection of operators and pilot devices for hazardous duty applications (Class 1, Division 2 and Zone 2). This series offers a wide selection of hermetically sealed reed and factory sealed contact blocks for superior corrosion resistance.

- NEMA 4, IP65 Rated
- Fits 1-13/64 (30.5mm) hole without notch required
- Contact blocks snap-in (fast & easy assembly)
- Up to 8 contact blocks for non-illuminated operators and up to 4 contact blocks for illuminated operators
- LED lamps with built-in leakage protection
- Same simple part numbering system as 22mm series

WEG Hazardous duty Pilot Devices are specially engineered for Class 1, Division 2 and Zone 2.

Wide selection of hermetically sealed reed and factory sealed contact block.

An all-polyester construction with nickel-plated or stainless steel metal parts for superior corrosion resistance.

Logic Reeds are hermetically sealed, Providing needed dependability for harsh environments.

Logic Reeds provide great operation for low power level (resistive loads only), especially PLC inputs.

Added Security - Standard Features

All Hazardous duty Push Buttons comes standard with a screw tightening mounting bracket to ensure the contact blocks remain tight to the operator

Added Security - Optional Features

Rubber Boots add an additional layer of protection from corrosive chemicals left behind from hands on operations or washdown environments.

Pushbuttons

Technical Data

FACTORY SEALED: Contact Blocks are Certified as "Explosion Proof". Devices employing this method of protection are designed so that all electrical parts are enclosed in a switch housing that is capable of withstanding, without damage, an explosion of a specified gas or vapor/air mixture which may occur during the operation of the switch. Further, the explosion internal to the switch body is controlled so that the hot gases are extinguished and cooled before they are allowed to escape to the surrounding atmosphere.

HERMETICALLY SEALED: Contact Blocks are Certified as "Non-Incendive". Devices employing this method of protection are designed so that all electrical parts are a bonded part of the switch housing that forms an arcing chamber that is evacuated of all oxygen, filled with an inert gas, and then sealed to prohibit the exchange of gases with the surrounding environment. These devices are incapable of igniting the surrounding gases or vapor/air mixtures under normal operation. Devices of this type are suitable for use in Div. 2/ Zone 2 applications. Hermetically Sealed contact blocks are also extremely useful for switching low energy circuits or circuits applied in atmospheres containing oxidizing agents and pollutants that might effect the performance of silver switching and metal contact elements. Hermetically Sealed Switch performance is consistent and repeatable in almost any environment.

Dielectric Strength (Mechanical Contacts) 2200V for 1 Minute

Factory Sealed Contact Block					
Class I Div. 2 Gr. B,C, & D / Zone 2 Gr. IIB +H2					
	Utilization Category		Make Rating	Break Rating	Ith-Thermal Current
	IEC	UL			
AC	AC-15	A600	7200VA	720VA	10A
DC	DC-13	Q300	69VA	69VA	2.5A

NOTE: For AC voltage below 72V AC the max. allowed switching current is 10A = Ith.
For DC voltages below 28V DC the max. allowed switching current is 2.5A = Ith.
For switching applications below 24V/40mA, Hermetic REED contacts are recommended.

Hermetically Sealed Mid-Power Reed Contact Block					
Class I Div. 2 Gr. A, B, C, & D/Zone 2 Gr. IIC					
	Utilization Category		Make Rating	Break Rating	Ith-Thermal Current
	IEC	UL			
AC	AC-15	C300	1800VA	180VA	2.5A
DC	DC-13	Q150	69VA	69VA	2.5A

NOTE: For AC voltage below 72VAC the max. allowed switching current is 2.5A = Ith.
For DC voltages below 28VDC the max. allowed switching current is 2.5A = Ith.
Suitable for switching DRY Circuits and Low Energy Circuits (Less than 24V-40mA).

Hermetically Sealed Power Reed Contact Block					
Class I Div. 2 Gr. A, B, C, & D/Zone 2 Gr. IIC					
	Utilization Category		Make Rating	Break Rating	Ith-Thermal Current
	IEC	UL			
AC	AC-15	B300	3600VA	360VA	5A
	AC-15	C600	1800VA	180V	2.5A
DC	DC-13	Q300	69VA	69VA	2.5A

NOTE: For AC voltage below 72V AC the max. allowed switching current is 5A = Ith.
For DC voltages below 28V DC the max. allowed switching current is 2.5A = Ith.
Suitable for switching DRY Circuits and Low Energy Circuits (Less than 24V-40mA).

Hermetically Sealed logic reed Contact Block					
Class I Div. 2 Gr. A, B, C, & D/Zone 2 Gr. IIC					
	Utilization Category		Inductive	Resistive	Ith-Thermal Current
	IEC	UL			
AC		220V Max.	N/A	40 Watt	2A

Suitable for switching DRY Circuits and Low Energy Circuits (Less than 24V-40mA).

Hermetically Sealed mid-logic reed Contact Block					
Class I Div. 2 Gr. A, B, C, & D/Zone 2 Gr. IIC					
	Utilization Category		Inductive	Resistive	Ith-Thermal Current
	IEC	UL			
AC	AC-12	250V Max.	40VA	100 Watt	3A

Suitable for switching DRY Circuits and Low Energy Circuits (Less than 24V-40mA).

Lock-off attachment

BTW Series Terminal Blocks

Terminal blocks are devices designed to provide safe and secure electrical and mechanical conductor connections. Among all available connectors, terminal blocks are the most commonly used to their specific characteristics. All parts were developed to assure side-by-side assembly, thus saving space inside panels. Easy assembly of these terminal blocks on DIN Rails reduces panel assembly time.

UL File No. E320231

Standard Features:

- Available in different colors
- Captive terminal screws or spring-clamps and PA66 polyamide body with high mechanical resistance
- Internal conductor element with high current conduction capacity
- Inlet tapered cable for easy insertion of conductors
- Stainless steel spring on spring-clamp type terminals
- Easy installation

Wide Range of Accessories:

- End plates
- Separating boards
- Connecting bridges/jumpers
- End brackets
- DIN rail / support
- Group identifiers
- Identifiers with or without markings

Power Factor Correction

PRODUCT GROUPS

UCWT Series – Three Phase Capacitor Unit (Heavy Duty)

BCWT Series – Bank of three phase capacitors with or without fuse protection, in NEMA 4 enclosure

WEG power factor correction capacitors were designed using self-healing metallized polypropylene film, have security protection against internal over pressure and the dielectric losses are less than 0.2 W/kVAr. The growing demand for electricity has required large investments in power generation to meet the rate of global development, both in developing countries where the population has gained greater access to consumer goods, and in developed countries, where energy efficiency has been object concern in order to reduce high investments in power generation. These investments, however, besides being planned in the medium and long term, involve the use of increasingly scarce natural resources which are subject to environmental pressures. In short term, the best way to increase the supply of electricity has been reducing waste and increasing energy efficiency. It is estimated that currently 40% of global consumption of electricity is related to the use of electric motors. Moreover, the application of new technologies has become increasingly common in many industry sectors, bringing deep changes in the form of application and control of electric motors. Within this context of technological changes and pressures for higher energy efficiency, WEG presents its line of capacitors for power factor correction.

Standard Features:

- Self-healing metalized polypropylene film
- Internal over pressure security device
- Maximum allowed fault current of 10kA
- Dielectric losses smaller than 0.2 W/kVAr
- Internal discharge resistors in three-phase units, modules and banks
- Custom Built PFCC Banks available upon request

Sizing Power Factor Capacitors

There are 2 methods we will use examples to show how to size power factor correction capacitors.

The simplest method uses the selected chart below. The selection chart shows the maximum KVAR based on the motor hp and rpm. The KVAR recommended is designed to improve the power factor to approximately 0.95.

HP	3600 RPM		1800 RPM		1200 RPM		900 RPM		720 RPM		600 RPM	
	Required KVAR	Est. Amp Red. %	Required KVAR	Est. Amp Red. %	Required KVAR	Est. Amp Red. %	Required KVAR	Est. Amp Red. %	Required KVAR	Est. Amp Red. %	Required KVAR	Est. Amp Red. %
1	0.5	15	0.75	24	1	29	1.5	39	1.5	42	2	42

Example:

For a 75 hp motor running at 3600 rpm, the maximum value would be 20 KVAR.

Important! Do not oversize the capacitors, when sizing at the motor load to avoid over voltage on the circuit.

Note: the KVAR needed to correct the Power Factor is the same regardless of the motor voltage. The actual capacitor selection is dependant on voltage.

Sizing Power Factor Capacitors

The next method uses a power factor multiplier chart and formula for calculating the recommended KVAR. This method is often used when sizing power factor capacitors for a system wide approach.

Existing power factor	Desired Power factor (F)														
	0.85	0.86	0.87	0.88	0.89	0.90	0.91	0.92	0.93	0.94	0.95	0.96	0.97	0.98	0.99

First, determine the Total kW used in the system.

Second, look to the left hand column of the power factor correction multiplier chart (Table above), and select the original or existing power factor.

Third, select the desired power factor and choose the number (multiplier) that intersects the two columns.

Take the number (multiplier) and multiply it by the Total kW of the system.

Example:

Total kW _____ = 500 kW
 Existing Power Factor _____ = 0.78
 Required Power Factor _____ = 0.92
 Multiplier from Table above _____ = 0.376

Formula:

$$0.376 \times 500 \text{ kW} = 188 \text{ kVAR}$$

For automatic switching or fixed units at the main, choose the closest value. If the exact kVAR is not listed, choose the next higher rating.

For the example listed above, it would be 200 kVAR.

If the existing power factor is not known, you can calculate it.

The power factor formula is: Active Power (kW) divided by the Apparent Power (kVA)

$$PF = kW / kVA$$

Notes: The examples shown on this catalog are strictly for guidance. Whenever possible, the load types and load curves of the installation should be evaluated. If more than 20% of the loads to be corrected are non-linear (VFDs, Soft-Starters, rectifiers, electronic reactors, etc.), Anti-Harmonics Inductors must be installed in series with the capacitors.

THD limit for capacitors: THDvoltage < 5% Vrms and THDcurrent < 15%.

The use of capacitors in electric systems with high harmonic distortions can internally damage the capacitive cells.

UCWT(Heavy Duty) - Technical Data

Technical Characteristics	D Series	E Series	F Series
Phases	Three Phase		
Power	0.45...5 [kVA _r]	4.47...17.5 [kVA _r]	8.94...50 [kvar]
Rated Voltage	208...480 [V]		
Rated Frequency	50 or 60 [Hz]		
Capacitance tolerance	±5 [%]		
Useful Life	100.000 [h]		
Temperature class	Min temperature: -13 °F / -25°C Max temperature: 131 °F / 55°C Avg. max. temp. in 24h = 13 °F / -10.5°C Avg. max. temp. in 1 year = 95 °F / 35°C		
Safety	Self-healing polypropylene film Disconnection for overpressure		
Max. Short Circuit Capacity	10 [kA] @ 560V		
Protection Degree	IP50	IP20	
Max. Altitude ¹⁾	6561 (ft) / 2000 (m)		
Shield / Terminal	Plastic / Screw + Washer	Aluminum / Box	
Input Cable Connection	M3 Flat/Philips	Box Terminal	
Input Cable Section	20...10 AWG	10...8 AWG	
Input Cable Torque	7...13 (lb-in)	13...22 (lb-in)	
Discharge Resistance	Inside the product	Fast-on Terminal	
Discharge Resistor	Included		
Capacitor Mounting Bolt	M12 bolt		
Max. Torque for Capacitor	124 (lb-in) / 168 (Nm)		
Impregnation	Polyurethane Resin		
Max. Voltage	1.1 x V _n 8h Duration for each 24 h - not continuous (system fluctuation)		
Max. dV/dt	≤ 30 [V/μs]		
Max. Current	1.3 x I _n (short periods of time)		
Max. Inrush Current	≤ 100 x I _n		
Voltage Test Between Terminals	2.15 x V _n for 2 sec		
Voltage Test Between Terminals and Enclosure	3 kV for 2 sec		
Reference Standards	IEC 60831-1/2 UL 810		
Certifications			

¹⁾ Maximum Altitude: 6561 ft. For application in higher altitudes, please contact WEG.

Accessories for Capacitors

Discharge Resistors

UCWT (E and F Series)				
Catalog Number	Resistance / Power	Package Quantity	List Price	Multiplier
RDC 39K 3W-UCW-T	3x39 kΩ / 3 W	1pk with 3 pieces	\$3	Z11
RDC 56K 3W-UCW-T	3x56 kΩ / 3 W	1pk with 3 pieces	\$3

RDC 390K 3W-UCW-T	3x390 kΩ / 3 W	1pk with 3 pieces	\$3	

D Series

Three Phase Capacitive Units - UCWT (Heavy Duty)

UL File No. E192546

Reactive Power 0.45...2.68 kVAR
Rated Voltage 208V

Reactive Power 0.5...3 kVAR
Rated Voltage 240V

Reactive Power 0.5...5 kVAR
Rated Voltage 480V

Electrical Connections

- Provided with NEMA 12 rating protection cover.
- M3 Flat/Philips screw terminals for connection of power cables.
- The D series capacitors are provided with internal resistors in the capacitive cell.
- Grounding is assured by connection of capacitive unit mounting bolt with assembly plate.

Mounting

Dimensions (in) and Protection Degree

Diameter (Ø)	Height (H)	Protection Degree
2.4	6.1	IP50
2.4	8.3	IP50

E Series

Three Phase Capacitive Units - UCWT (Heavy Duty)

Reactive Power 4.47...8.94 kVAR
Rated Voltage 208V

Reactive Power 5...10 kVAR
Rated Voltage 240V

Reactive Power 0.5...5 kVAR
Rated Voltage 480V

Electrical Connections

- “Box” type terminals for connection of power cables.
- Fast-on connection terminals for discharge resistor connection
- The E series capacitors are provided with external resistors in the capacitive cell.
- Allows connection of power cables separately from discharge resistors.
- Grounding is assured by connection of capacitive unit mounting bolt with assembly plate.

Mounting

Dimensions (in) and Protection Degree

Diameter (Ø)	Height (H)	Protection Degree
2.9	8.7	IP20
2.9	11.1	IP20
3.3	14	IP20

F Series

Three Phase Capacitive Units - UCWT (Heavy Duty)

Reactive Power 8.94...26.82 kVAR
Rated Voltage 208V

Reactive Power 10...20 kVAR
Rated Voltage 240V

Reactive Power 18...50 kVAR
Rated Voltage 480V

Electrical Connections

- “Box” type terminals for connection of power cables.
- Fast-on connection terminals for discharge resistor connection.
- The F series capacitors are provided with external resistors in the capacitive cell.
- Allows connection of power cables separately from discharge resistors.
- Grounding is assured by connection of capacitive unit mounting bolt with assembly plate.

Mounting

M12 bolt mounting
(Nut and washer included)

Reduced height accommodates installation in MCC buckets.

Dimensions (in) and Protection Degree

Diameter (Ø)	Height (H)	Protection Degree
3.9	9.1	IP20
4.6	9.1	IP20

Three Phase Enclosed Capacitors - BCWT

BCWT Series

Straight-forward Design

WEG Enclosed Power Factor Capacitor Banks include Three-phase WEG UCWT Capacitors in a NEMA 4 enclosure that is easy to install and wire.

Reliability

WEG UCWT Capacitors are assembled with high performance and low loss, self healing polypropylene dielectric film.

Flexibility

Three phase enclosed capacitor banks available with or without fuses. NEMA 4 enclosure is standard, so no need to worry whether the installation is indoors or outdoors.

UL File No. E346734

Three Phase Enclosed Capacitors - BCWT

Non-Fused - 240V

Technical Information

NEMA, UL and CSA Enclosure Ratings

Enclosure Rating	NEMA National Electrical Manufacturers Association (NEMA Standard 250) and Electrical and Electronic Mfg. Association of Canada (EEMAC)	Underwriters Laboratories Inc. (UL50 and UL508)	Canadian Standards Association (Standard C22.2 No. 94)
Type 1	Enclosures are intended for indoor use primarily to provide a degree of protection against contact with the enclosed equipment or locations where unusual service conditions do not exist.	Indoor use primarily to provide protection against contact with the enclosed equipment and against a limited amount of falling dust.	General purpose enclosure. Protects against accidental contact with live parts.
Type 3	Enclosures are intended for outdoor use primarily to provide a degree of protection against windblown dust, rain, and sleet; undamaged by the formation of ice on the enclosure.	Outdoor use to provide a degree of protection against windblown dust and windblown rain; undamaged by the formation of ice on the enclosure.	Indoor or outdoor use; provides a degree of protection against rain, snow, and windblown dust; undamaged by the external formation of ice on the enclosure.
Type 3R*	Enclosures are intended for outdoor use primarily to provide a degree of protection against falling rain and sleet; undamaged by the formation of ice on the enclosure.	Outdoor use to provide a degree of protection against falling rain; undamaged by the formation of ice on the enclosure.	Indoor or outdoor use; provides a degree of protection against rain and snow; undamaged by the external formation of ice on the enclosure.
Type 4	Enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against windblown dust and rain, splashing water, and hose directed water; undamaged by the formation of ice on the enclosure.	Either indoor or outdoor use to provide a degree of protection against falling rain, splashing water, and hose-directed water; undamaged by the formation of ice on the enclosure.	Indoor or outdoor use; provides a degree of protection against rain, snow, windblown dust, splashing and hose-directed water; undamaged by the external formation of ice on the enclosure.
Type 4X	Enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against corrosion, windblown dust and rain, splashing water, and hose-directed water; undamaged by the formation of ice on the enclosure.	Either indoor or outdoor use to provide a degree of protection against falling rain, splashing water, and hose-directed water; undamaged by the formation of ice on the enclosure; resists corrosion.	Indoor or outdoor use; provides a degree of protection against rain, snow, windblow dust, splashing and hose-directed water; undamaged by the external formation of ice on the enclosure; resists corrosion.
Type 6	Enclosures are intended for use indoors or outdoors where occasional submersion is encountered, limited depth, undamaged by the formation of ice on the enclosure.	Indoor or outdoor use to provide a degree of protection against entry of water during temporary submersion at a limited depth; undamaged by the external formation of ice on the enclosure.	Indoor or outdoor use; provides a degree of protection against the entry of water during temporary submersion at a limited depth. Undamaged by the external formation of ice on the enclosure; resists corrosion.
Type 12	Enclosures are intended for indoor use primarily to provide a degree of protection against dust, falling dirt, and dripping noncorrosive liquids.	Indoor use to provide a degree of protection against dust, dirt, fiber flyings, dripping water, and external condensation of noncorrosive liquids.	Indoor use; provides a degree of protection against circulating dust, lint, fibers, and flyings; dripping and light splashing of non-corrosive liquids; not provided with knockouts.
Type 12K	Enclosures with knockouts are intended for indoor use primarily to provide a degree of protection against dust, falling dirt, and dripping noncorrosive liquids.	Indoor use to provide a degree of protection against dust, dirt, fiber flyings, dripping water, and external condensation of noncorrosive liquids. Knockouts located in the top or bottom walls, or both.	Indoor use; provides a degree of protection against circulating dust, lint, fibers and flyings; dripping and light splashing of non-corrosive liquids; provided with knockouts.
Type 13	Enclosures are intended for indoor use primarily to provide a degree of protection against dust, spraying of water, oil, and noncorrosive coolant.	Indoor use to provide a degree of protection against lint, dust seepage, external condensation and spraying of water, oil, and noncorrosive liquids.	Indoor use; provides a degree of protection against circulating dust, lint, fibers, and flyings; seepage and spraying of non-corrosive liquids, including oils and coolants.

*NFPA 70 (National Electric Code) defines new Type 3RX as providing the same degree of protection as Type 3R, with the addition of protection against corrosive agents.

Technical Information

IEC Enclosure Ratings

First Numeral

Protection Against Ingress of Solid Objects		Protection of Persons Against Access to Hazardous Parts with:	Examples
IP	Requirements		
0	No protection.	Non-Protected	
1	Full penetration of 50mm diameter sphere not allowed. Contact with hazardous parts	Back of Hand	
2	Full penetration of 12.5mm diameter sphere not allowed. The jointed test finger shall have adequate clearance from hazardous parts.	Finger	
3	The access probe of 2.5mm diameter shall not penetrate.	Tool	
4	The access probe of 1.0mm diameter shall not penetrate.	Wire	
5	Limited ingress of dust permitted (no harmful deposit).	Wire	
6	Totally protected against ingress of dust.	Wire	

Second Numeral

Protection Against Harmful Ingress of Water		Protection from Water:	Examples
IP	Requirements		
0	No protection.	Non-Protected	
1	Protected against vertically falling drops of water. Limited ingress permitted.	Vertically Dripping	
2	Protected against vertically falling drops of water with enclosure tilted 15° from the vertical. Limited ingress permitted.	Dripping up to 15° from the Vertical	
3	Protected against sprays to 60° from the vertical. Limited ingress permitted.	Limited Spraying	
4	Protected against water splashed from all directions. Limited ingress permitted.	Splashing from all Directions	
5	Protected against jets of water. Limited ingress permitted.	Hosing Jets from all Directions	
6	Protected against strong jets of water. Limited ingress permitted.	Strong Hosing Jets from all Directions	
7	Protected against the effects of immersion between 15cm and 1m.	Temporary Immersion	
8	Protected against long periods of immersion under pressure.	Continuous Immersion	

Additional Letter (Optional)

Protection Against Ingress of Solid Objects		Protection of Persons Against Access to Hazardous Parts with:	Examples
IP	Requirements		
A (For use with first numeral 0)	Penetration of 50mm diameter sphere up to	Back of Hand	
B (For use with first numerals 0 and 1)	Test finger penetration to a maximum of 80mm must not contact	Finger	
C (For use with first numerals 1 and 2)	Wire of 2.5mm diameter x 100mm long must not contact hazardous	Tool	
D (For use with first numerals 2 and 3)	Wire of 1.0mm diameter x 100mm long must not contact hazardous	Wire

The information in this table was extracted from Table 430.248 and 430.250 of the NEC.

The following values of full load currents are for motors running at usual speeds and motors with normal torque characteristics. The voltages listed are rated motor voltages. The currents listed shall be permitted for system voltage ranges of 110-120, 220-240, 440-480 and 550-600 Volts.

Warranty Policy for Automation Products

WEG USA General Terms and Conditions available at www.weg.net apply to all orders.

No-Fault Warranty

WEG Power and Control Products are covered under a “No-Fault” warranty process. Please see the table below for specific information on products covered by this warranty program. For products that meet the requirements of the “No-Fault” program WEG will provide replacement, free of cost.

This warranty claim is offered one time, per end-user, per application. In the event of repeated product failure please contact the WEG Automation Service Department to assist in review and resolution of the issue.

The following information must be provided within the warranty period of the product and no more than 30 days after the failure occurrence via e-mail to the WEG Automation Service Department (automationtech@weg.net) to initiate the warranty claim:

- A picture of the label with serial number information from the failed product
- The original WEG invoice number / copy of the invoice for the failed product
- A Brief description of the issue with the product – for use in our quality evaluation process

Power and Control Products:

Product	Product Reference	Covered Products
Circuit Breakers and Disconnects	DWB, UBW, UMBW, MSW, MSWB	Limited to \$100 value
Contactors, Motor Protectors, Relays	MPW, CWC, CWB, CWBN, CWBS, CWM, CWMN, RW, RTW17, ERWT, RMW17, PRW, ERNW, RNW, SSW01	
Starters	ESW, PESW	
	ESWC, ESWE, ESWF, ESWX	
Operator Devices and Terminal Blocks	CSW, BTW	
Capacitors	UCWT, BCW	

Warranty on Products not included in “No-Fault” Warranty Process

WEG Automation products are warranted against defects in workmanship and materials for eighteen (18) months from invoicing date if the following requirements are met:

- Suitable transportation, handling and storage;
- Correct installation within the specified environmental conditions and without the presence of:
 - Direct exposure to sunlight, rain, high humidity, or sea-air
 - Inflammable or corrosive gases or liquids
 - Excessive vibrations
 - Dust, metallic particles, and oil mist
 - See your user manual for additional installation requirements
- Operation within the designed capacity limits
- Performance of scheduled preventive maintenance
- Repairs and/or modifications only made by authorized WEG service, proof required for warranty
- In the case of any deficiency, the equipment must be available for sufficient time for the technician to identify the cause of the failure and undertake the proper repairs
- The purchaser must report any faults immediately so that WEG Automation can verify the workmanship or material failure.

Limited Warranty:

WEG Electric Corp. is proud of all our product lines. WEG and its employees are committed to our customers and users to provide the best designed and manufactured motors, drives and controls. WEG provides a limited warranty on our products against defects in materials and workmanship for a specific period from the date of purchase. If a product date code is within its stated warranty period (18 months, 36 months, etc.), no proof of purchase is required. Otherwise, a copy of the invoice is necessary to show the date of purchase. Purchases of WEG products from unauthorized dealers or distributors, even of otherwise “new” WEG products, voids warranty coverage. WEG’s authorized distributors are shown under “Support” “Where to Buy” on our website at www.weg.net

Warranty Service:

If a WEG product requires warranty service due to defective materials or workmanship, WEG will, at its option, either repair or replace the defective product. By “replace”, WEG Automation Service Department will be shipping a replacement product. WEG is not responsible for any expenses incurred in installation, removal from service, transportation (freight) or consequential expenses.

Warranty Policy for Automation Products

Return Policy

WEG products that are purchased from our stocking warehouses must be returned within 90 days, freight to be paid by customer. Returned products must be unused, and in undamaged original packaging. If products are ordered incorrectly by the customer and need to be returned to stock, then a 20% re-stocking charge will be applied. If the returned products are deemed not to be in unused, undamaged condition, or in original packaging, then additional fees will be applied (up to and including full price of item). Returns on any modified products will not be allowed. Any products that are ordered as specials (with features that would not allow them to be stocked items) cannot be returned.

Credit and replacements

For any possible warranty failure, WEG Automation service department must be advised and it will be sending replacements, at WEG's discretion. Customer cannot purchase a new drive and claim the credit reimbursement, automation service needs to handle the replacements, free of cost to customer. Later failure analysis will be made and the warranty determination will be communicated to the customer. If it would be determined that is not warranty, customer will need to pay for the replacement unit.

Proper Storage of Products:

When automation products are not immediately installed, they should be stored in their normal upright position in a dry even temperature location, free of dust, gases and corrosive atmosphere. Drives stored for a period exceeding one year should have the reforming process done prior to the installation, for more info, please contact automation service department.

Limitation of Warranty:

THE FOREGOING WARRANTIES ARE EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES OF QUALITY AND PERFORMANCE, WRITTEN, ORAL OR IMPLIED, AND ALL OTHER WARRANTIES INCLUDING ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ARISING FROM COURSE OF DEALING OR USAGE OF TRADE ARE HEREBY DISCLAIMED BY WEG. THE FOREGOING OBLIGATION TO REPAIR OR REPLACE WEG PRODUCTS OR PARTS SHALL BE THE SOLE AND EXCLUSIVE REMEDY OF THE PURCHASER, ITS CUSTOMERS, OR USERS OF THE PRODUCTS OR PARTS.
